I remember when RRAP was respectable, then Mark morgan came back and Woger found someone he could pick on with ease, like taking candy from a baby. It doesn't help for Mark to admit he doesn't have anything against homos, and Woger teases him about it. I have to admit I've got caught up in it too when the only reason I came back was to try to make the group respectable again and try to get usenetter hams to support keeping the code requirement. But with Mark here now and not enough good folk left in the group, I'll probably just bow out, and the stupid and lazy can take over ham radio.

It's written tests and CW that keep the sick, lame, and lazy, out of your receiver, not a plonk button or kill-filter. Don't degrade receiver performance. Support keeping CW, and increasing the speed requirement, and make the passing score for writtens 85%.

TNX, 73 de Slow Code :-)

I remember Marks stupid ass posts in the late 1990's and when he left I
hoped he would give up on ham radio and stay on CB.  But he came back and
now him, Lloooydie, and Woger have wrecked usenet and ham radio. I hope
they're happy.

rec.radio.scanner:6383 rec.radio.shortwave:53472 rec.radio.swap:7668

As a reader and frequent contributor to the rec.radio.amateur.antenna newsgroup, I see a large and increasing volume of messages cross posted to a large handful of groups which have nothing to do with antennas. Not surprisingly, I don't see any of the regular contributors to this newsgroup participating in the endless arguments about Morse code, testing requirements, and what it takes to be a "real" amateur. These threads seem to be increasing in number daily, involving the same participants, and have grown to the point that the signal-to-noise ratio of rec.radio.amateur.antenna newsgroup is getting seriously degraded. It's becoming necessary to fish through multiple off-topic threads to find the postings involving antennas.

There's no point in including rec.radio.amateur.antenna in the list of newsgroups you send these postings to. There are certainly groups whose readers are much more interested in participating or reading about these topics.

So my request is: Please don't include rec.radio.amateur.antenna in the list of newsgroups you send the original posting to. And when replying to a thread whose topic doesn't involve antennas, simply delete rec.radio.amateur.antenna from the list of newsgroups receiving the reply, before clicking "Send". This won't detract in any way from your discussions, and will be a relief for rec.radio.amateur.antenna readers and participants.

Thanks and 73,
Roy Lewallen, W7EL

well you got half your wish I stayed on CB as well as Ham radio
>  But he came back and
> now him, Lloooydie, and Woger have wrecked usenet and ham radio.
such power you credi t me with but real SC i must decline the honor

the wrecking of Ham radio as you choose to define it is your own doing
along with Heil Robesonn Jim  old posters like Yo Doc and MD you killed
the hamradio you sought to save, basicaly by trying to ram it down the
throats of the rest of us

in the 1990 the NoCoders would like have settled for something wht
Canada has in place now, presreving a lot of what you wanted

>I hope
> they're happy.
not till the R&O come out

Sure!

I guess that you were not around during the heyday
of the 14.313 and 75 Meter Jamming Wars of
the late 70's and 80's.

ALL of the QRM'ers involved had a General or better
and in those days you had to pass a 13 WPM code test

to even GET ON the HF spectrum.

Your argument is as pointless as your ball-shaped fart head.

You mean the lazy hams who make "broadcasts" in the 13. MHz frequency
range?

Your posts and shitty "broadcasts" have contributed to it more, Toad.

My request is: Please learn about kill files, and please learn how to
take action yourself by killing all posts crossposted to groups other
than rec.radio.amateur.antenna. You'll have a much greater chance of
changing yourself than you will of getting everyone else to do your
bidding, and you'll be a whole lot less frustrated once you do figure
that simple task out.

I have a theory about hams who can't even master a news reader, but I'll
leave that discussion for another thread.

Chris, we don't mind using the filters. The problem is they (you) are
changing the subject every single day so we are constantly making new
kill filters. THATS the problem.

No, YOU are the problem. A proper kill filter will kill all crossposts,
no matter what the identity of the poster may be. If you really knew

how to use a kill filter (and you obviously don't), morphing posters would present no problem at all.

You also top post, and that makes it obvious that you have a lot yet to learn about Usenet.

Hey man,

Instead of insulting someone and trying to prop yourself up with your
expertise, why not just share your "wealth"?

Kill filters are helpful, but only to a certain degree. I have 6 kill
filters for the "slow code" gang, but they have so many aliases, a lot
of the crap still gets through. And the same crap is inundating many
of the other amateur radio news groups. Some of the responsibility has
to be put on the duds who have nothing better to do all day long than
contemplate their slow code navels.

Please explain how to do that with Thunderbird.

You should make sure that you have a proper news reader and then configure it as has been outlined in the news.answers FAQs for the last 20 years or so. If Thunderbird won't cut the mustard, then you should drop it in in favor of one of the other three or four *free* newsreaders which can do the job.

Usenet users should take responsibility for their own environment and stop asking others to do it for them. Too many people have a cheesy newsreader (such as Google Groups) and are too lazy to find a good one. They are often the people who complain the most loudly about crossposts instead of doing something about it themselves.

(Hint: People using newsreaders which can filter on the Newsgroups header should develop a filter which uses that header. If an article is crossposted, there will be at least one comma in that header. To kill all crossposted articles, kill all articles with a comma in the Newsgroups header. You can also use the Xref header to do the same thing by searching for two or more colons.)

You may want to read up on Viterbi, Sequential, Turbo Product Codes
(TPC) and Low Density Parity Check (LDPC) forms of FEC to see how they
work and see if that statement still holds true!

It's truly amazing how many errors Turbo codes and LDPC codes can
actually correct even with only an additional 5% of error correction
coding on top of the data stream in some cases!

Poor old KB9YGD Norman P Triantafilos 2634 Warren Street Lake Station
IN 46405
Phone 219 962 8416

Norman lives in a garage shack, he owes back Federal Tax of around 30,000.00 he hates America, he is Greek so don't turn your back on him.

Norman is being watched by neighbors, he has no friends, we use to call him crazy Norm, he has one child out of wedlock (bastard) that he never does anything for him, the kid looks just like him (poor kid).

Norman keeps all his money in his home, he can't put it in the bank because the IRS would levy on it due to the back tax he owes.(he has lots of bucks stashed in his house)

Norman's cat Tiggy just croaked (thinks more of a damn cat than his own kid) now old Norman is all alone with his pistol, he is very insecure and dangerous to himself and neighbors, they are keeping an eye on old crazy Norm.

Norman get some professional help, you need it. Norman has lots of Ham gear and tools in his garage in the back, the neighbors have cut his coax a couple times for ripping up their tv's and phones, poor Norman he is a recovering alcoholic, I use to smoke a little pot with him but he couldn't handle it and the booze together.

Now Norman claims to be a saint, a reformed drug and alcohol abuser, ah our past eh Norm, remember that black whore who took your 30.00 bucks, ah ha ha I got some of that pussy in the back seat of your caddy and you got ripped off, or did you pay to just watch, ah ha ha, you freak.

See Norm, when you talk about me it gets back, remember we were friends and I know plenty about your personal life and the years we worked together at the EJ&E RR, I'm not ashamed of anything I have done in my life, it was all a great experience and I wouldn't trade it for nothing, I have enjoyed my life, some good some not so good, at least I'm not a lonely old bastard who hates as you do, I have a wife and a nice home that's almost paid off from my settlement, 5 more years and I'm on easy street, I can go and buy anything I want at anytime, I have not lost anything especially myself as you have, I have friends and relatives close, I have grandkids that adore me, what do you have? you are such a miserable old bastard who is so paranoid someone is going to get something you have.

Wake up Norman life is too short to be a mean old nasty asshole that hates and is envious of others, you won't listen, you will die an old nasty bastard who no one will give a shit about.

Roy. I appreciate your point and I'm sorry for disturbing the
newsgroup. It won't happen again, I promise. I'm glad we have
RRAA because I had antenna questions they couldn't answer over
in rec.radio.cb

Does one long continuous wave(CW) make your antenna warm in the winter?

What kind of antenna do you use to receive CW, a vertical co-linear
ground-plane or some form of half-wave Dipole? What's Best?

Does antenna polarization matter if the CW is high speed and received
with a computer?

A lot of hams now are Appliance Operators and hate CW, how can they
keep CW of their antennas?

I heard like if you hook the coax to your dipole antenna in reverse, CW
comes out backwards, Like POTS would come out as STOP. Is that true?

Thanks Roy, keep up the good work! You're doing a good job. 73

What a Loon!  In one thread you think I'm Lloyd and in this thread you
think I'm Todd.   You're as confused as Mark and just as stupid.  Maybe
that's why you two get along with each other so well.

The crap on news:sci.electronics.misc is crossposted from news:sci.electronics.policy, which is a watering hole for the biggest idiots on usenet.

Rush absolutely should have taken the same deal that the dems set up
for themselves and their "drugged-out" loser children. Wonder why jobs
go overseas? Few in America can pass a drug test.

NORMAN TRIANTAFILOS Story Part A. (The Story of a Coward)

Norman was born in Gary Indiana he is now 60 years old, it would seem with age you get a little more intelligence, but not the case with old Norman, he just gets more psychotic.

Norman resides at 2634 Warren Street Lake Station IN 46405
Phone number is 219-962-8416 a little shack garage that's converted into living quaters that imo should be condemed.

Norman has many alias, why because he is psychopathic; psychoneurotic with the mind of a criminal, Norman suffers from dementia praecox, a severe mental disorder characterized by some, but not necessarily all, of the following features: emotional blunting, intellectual deterioration, social isolation, disorganized speech and behavior, delusions, and hallucinations.

Norman has a general class amateur radio license with the call letters of "KB9YGD" he characterizes himself as "The Real Ham" in reality he is nothing more than a whinning child, he is dangerous and carries a gun (9mm auto pistol) with him at all times due to his insecurities, be aware that he could snap at any given moment and cause harm to himself or others.

I have informed the Lake Station Indiana athorities and they are well aware of this criminal and watching him, they have several reports on him from neighbors who live close and in fear of his psychotic manners, he especially hates blacks and uses the word "nigger" he imho is a racist and may be a card carring KKK member.

WA9TSQ Bernard S Gawronski of 951 N 100 W CHESTERTON IN 46304 was receiving threating emails from Norman over a dispute at the PCARC meetings, all were sent in an annomymous reamailer from Norman Triantafolis, this I have proof of.

Norman was an alcoholic doper who stayed high the majority of his life, he claims he has reformed, but one has to wonder if he still is on the booze or drugs from some of the posts he submitts here on these groups, he lost his job at the E,J & E Railway for reasons unknown, I have heard but can not verify he was fired for reasons of a mental disorder.

"DISCLAIMER" These are my opinions, some are facts and some are speculation, you decide for yourself....

Nah, they're ALL drugged out losers. Some have lost more than others.  Rush
is fortunate in that he got busted before he could do more damage to himself
than just his hearing loss.  Most of the rest are at least half brain dead.

Hmmm. A radio personality who railed against drugged out hippies and
"tree huggers" is caught in the act of illegally obtaining drugs for his
own use. Purchasing drugs in a parking lot with shoe boxes full of cash
for his local pusher.

Who is hypocritical? Linearity is a curious concept when applying it to
this obese fraud.

Al Franken had it right: "Rush Limbaugh is a Big Fat Idiot".

If YOU'RE offended that's YOUR problem.

"10 Meter Amateur Radio Band Coverage (26-30MHz)"

Prima Facie Illegal.  They can't be sold IN the United States, or TO
the united States.

Next time you want to talk about the law, read it first - you'll look
less foolish and less crooked.

My FT-1000MP MKV-Field has a problem. May be could help me before I contact a dealer.
The control button of my headset exits A and B (below left of the rtx) doesn't produce any effect (or show both the same level of audio). The sound is now loud and no more softy as before in the speaker. So I can more adjust the sound.
Is there a device or component that blew out or a cabling or menu to check ?

Thanks
Thierry

As I recall a Mill is a all caps typewriter used to copy messages and
radiograms by the Military.
On our Navy transport planes, we had such a device at the Radio Operators
position.

See URL:
http://www.telegraph-office.com/pages/wireless_gallery.html

But Mill has historical reference -- see Henry Mill - URL:
http://inventors.about.com/gi/dynamic/offsite.htm?site=http://www.maxmon.com/
1714ad.htm

Sez you, you smarmy, liar. One of the posts I sent to the FCC was from the guy who makes the units, claiming they were for CB.

By the way, This "newbie" got his first ham license in 1952, and his first Commercial License in 1955.

I am trying to repair my radio after I got hit by lightning. I need the synthesizer board. The Harris part # for the synthesizer board is

10085-5600. If anyone has a spare board they would be willing to part with I would like to hear from you.

Stuart

Hello the Group!

I have an Heathkit HW-101 that operates well on 80/75/40/20 and is useless on 15/10 meters because of all the higher frequency junk in this area. The Area is Ann Arbor/Ypsilanti near the WAAM antenna group.

I want to sacrifice the 15 meter and one of the 10 meter positions for the 30 and 17 meter bands. From what I can see on the diagrams and the crystals being used, I think all I would need are crystals in the proper cans at the frequencies 18.895 for the 30 mter range and 26.896 for the 17 meter range.

I realize that just changing out the crystals may not be all that is

needed, however, this is the first step. Any Heathkit resources out there?

And are the crystal cans of the HC6/U variety or the HC33?

Curtis Scholl

And, it appears not to comply with several specific FCC regulations:

- It has gain through the CB frequencies (violates 97.317 (b)) and is thus not eligible for certification, which is required for amps operating below 144 MHz. The FCC may be about to relax or eliminate the 97.317 rules about external amps operating in this frequency range, but for the moment this reg is still part of the law.

- Its second- and third-harmonic distortion levels are roughly 10 dB too high to meet the -43 dBc requirement (violates 97.307 (d)).

Perhaps it's designed for IPods? Most everything seems to be!

I wonder if I ran the above through google translater, and printed it out
in Egyption hieroglyphics if it would be easier to understand.

Are you sure you wouldn't rather sell the '101 and use the money to help
fund a radio with the bands already built in? The crystals are part of the
necessary changes, but you'll also have coils and caps to change or modify
on the switchboards, perhaps finding new taps on the output coil. Looking
at the manual, it seems that some of the switches appear to be sliding
shorts, so you may have to reposition the 20M band components.
This will reduce whatever value it may have and when you're done, it will
still be a 20 to 30-year old radio with a non-standard modification.
That being said, go for it! There are various ways to get information,
manuals etc. Use a search engine. Sorry, I think crystals are HC6, but
can't be sure. It's always possible that a change was made after I got
mine, in early '70s.

Depends.
What is the transmitter power? What is the separation
between the transmitter and receiver?

>
> I ask because I think -- but definitely don't know -- that because the

If there is a decent SNR you are correct.
If the SNR falls below a certain value then
the reverse is true.

   dB without a reference is meaningless.  How can you have a ratio
without a reference?

That radio shouldn't even use a potentiometer for tuning. IIRC, it uses a digital sensor similar to the one used in a computer mouse. On one side there is an infrared LED, on the other a photosensitive transistor or diode. In between is a wheel with many square teeth on it. As you turn the tuning knob, it moves the wheel and alternately interrupts the light from the LED from getting to the phototransistor. As this happens it causes a pulse that is sent to the tuning IC to change the frequency. On either side of the wheel to center should be a microswitch that tells the IC which way (lower or higher) the frequency should change.

dB is a ratio, not a power.

Hi,
Well,from what I can see this is a potentiometer.
There isn't any infrared LED or photosensitive transistor or diode.
Now you have me wondering what's going on...?

Thank you

I'm not sure what you mean by the "probe". The deal with Reed Solomon
is it is a non-binary code, which was a big deal at the time. The
buzzword is Galois mathematics. There wasn't any hardware that could
handle the code when it was invented.

Clayton,

Just looked at the schematic. It's definately not a potentiometer. It doesn't show the internal workings of the device, but it's definately an encoder of one type or another. One leg has +5VDC to it, the other two go to the logic board as connections SA1 and SA2. It's possible that it's nothing more than a momentary contact switch that sends pulses to the logic board for up/down frequency.

E-mail me and I can send you the schematic.

Brenda Ann

For Sale: Icom 25 Amp Power Supply

I have an Icom PS-125 I rec'd when I bought my Icom 746PRO, and I do not use
it (as I had a 20 A Astron in my shack).
So I decided to sell it.

I have not used it at all.

Price 145.00 Shipped to the 48

You really should not be working on this rig if you think tuning is
accomplished by a pot. This era rig has to use a mechanical or optical
encoder. Send it in to a repair location.

I'm thinking of taking my Collins 32V-3, 30S-1, 651S-1 to the Peoria swap this weekend. Asking prices are $2000.00, $1600.00. $1000.00 respectivley. I would consider trading for older US made dreadnought guitar by Martin, Taylor or Gibson or perhaps an older US made 5 string banjo. Also have a Cubic R3030 dual VLF, HF Rx; $2000 and a Drake L75 for $1000. Driving up from Tulsa. Any interest?

At those prices I would plan on driving them back to Tulsa, also.

Easy. "dB" in general usually refers to acoustic power, where the reference
is some ungodly small power level (10^-12W/m^2 IIRC?).

I forget if there's a similar radio context used...

Tim

The answer is this:

It would be far more suceptable to interference than the AM equivalent.

The far higher bandwidth gives you a far higher noise bandwidth than the narrower AM equivalent.

So because of the large bandwidth, AM would beat it hands-down.

Sam

I think you need to be a bit clearer in your thinking. I see several people have commented on your use of dB and it seems Mike dealing with the digital side so I'll not pick up on those. I'd like to comment on " the antennae and receivers are so sensitive that they can pick signals as low as........" and your other comment about wide bandwidth.

Firstly, a "sensitive antenna" isn't a good concept, better to think in terms of gain.

However, more importantly, sensitivity isn't just about how "small" a signal your receiver system can "pick up"- you can (in theory) just add more and more gain. The issue is the ratio of the signal to the noise- that is the noise your receiver introduces and that which is "picked up" by the antenna. Winding up the gain doesn't help much with the latter- the noise in the available bandwith is amplified as well. Often a good way to get a better signal to noise ratio is to reduce the bandwidth so, before you get too hung up on having a wide bandwidth, think about what you need to do the job.

I also notice someone mentioned Galois- there was a thread some time back in uk.radio.amateur where I explained the maths behind these. I'd sure a search of Google Groups will turn it up.

That site would be more convincing if it wasn't a come-on to use THEIR version of "Paypal." Paypal is OK, IF you use common sense.

There is no exception; dB is meaningless without a reference. Decibel is
used in radio also.

Don

Never had a problem with Paypal. Ever. In fact, I generally don't bid on
auctions UNLESS the seller takes Paypal.

Is it just a coincidence that this collection of horror stories is selling
an alternative?

You need to do a lot of studying on how to use the dB. Without a reference, it is meaningless. The classic use in audio was 1 mW into 600 Ohms = 0 dBm, and yes, there are a number of RF uses for the dB. Either in reference to one of several different reference levels, or as an absolute ratio, such as the input to output level of an amplifier.

Because of phishing, trojans, and other very smart crooks trying to get
into my account, and also because of Paypal complaints that are legion,
there is no way I would link up my main bank account with Paypal. When
I sell something on ebay, I request payment by a money order, when I
buy something on ebay I pay by money order. If the seller wants Paypal
only, I move on to the next listing. I have noticed that more and more
sellers are glad to accept money orders, especially individuals who are
selling their own stuff. I have had no problems with Paypal but there
are just too many really clever scammers working the internet. I
maintain a tiny account in a different bank to handle fees: if I do get
hit by a crook, or by Paypal, the loot would only be about $5.00. In
addition, in Canada, interbank money transfers are safe and inexpensive.

The fact that it has a V+ connection suggest that it is a quadrature optical
encoder. When you turn the encoder clockwise, channel A leads channel B;
counterclockwise rotation, channel B leads channel A. That is how you get
the directional cueing.
You need to check if there is 5V at the V+ terminal. Your wild meter
readings tell me that the unit is outputting the 5V pulses when rotating.
Get ahold of the schematic from mods.dk and go through the circuit. You
could have a bad uP, in which case the radio is now trash. Hopefully, that
isn't the case.

Pete

Okay, in this theoretical experiment of mine, the gain is set at
maximum thats physically-possible

>
> However, more importantly, sensitivity isn't just about how "small" a signal

Hopefully I can get some frightening-yet-enjoyable heterodynes from far
outer space amplified in my hypothetical audio system.

> Often a good way to get a better

One compelling reason to ONLY fund PayPal with a Credit Card that
will charge-back unauthorized activity and to request a check if you
have more than $20 in your account.
They cannot take what they don't have.

>> It would be far more suceptable to interference than the AM equivalent.
>
> Including heterodynes?

Theoretically, with optimal decoding, you require around 3dB C:N to decode an AM digital signal.

3dB C:N as opposed to the 20dB C:N that you need to get a good AM signal sounds to be a winner.

But AM would be about 30khz bandwidth, and this PCM signal would be 3mhz.

That means that the bandwidth gives you at least 20dB less sensitivity, so comparing the signal bandwidth-wise, you only require 0dB C:N across the same bandwidth to get the AM signal.

So you have a 3dB advantage for conventional AM over PCM.

Next, let us look at the nature of AM and heterodynes.

By the nature of audio AM, you will find that a single heterodyne can degrade the C:N to as low as 10dB before it becomes perceptible.

So therefore in the same bandwidth with PCM, you then have -10dB C:N, which is not enough to decode the PCM.

Therefore, PCM is inferior to AM, and you would not only be wasting precious bandwidth, and face considerable issues with other transmissions and the physical design of the antenna, transmitters and receivers, you would also find that it is nowhere near as effective.

Maybe studying something like GSM compression or MP3 compression formats, FEC and COFDM or similar may be your answer.

COFDM with a good FEC system is one of the most robust methods to transfer digital data in the presence of heterodynes there is. With the correct encoding and decoding techniques, you can have easily -80dB C:N because of a heterodyne some 80dB stronger than your signal, and the data would be still decoded correctly. Theoretically you could have hetrodynes thousands of dB stronger than the carrier, but unfortunately the reciever technologies are nowhere near that advanced yet, but even with cheap decoders, you could aim for around 80dB as a realistic goal under ideal situations (which is what you appear to advocate).

A few days ago a local ham and I were discussing QsoNet (qsonet.com) and its effect on the future of ham radio. My posting on QsoNet in this newsgroup generated some interesting feedback.

There is no doubt that VoIP is having a big impact on ham radio. Early programs like IRLP were beneficial in linking repeaters and provided a cost-effective alternative to satellite, land-line or UHF connections. Next generation programs like Echolink and eQSO have RF connection capability but also allow PC based users to interconnect PC-PC, (a free telephone alternative). To me these programs appear to be the same as

IRC, Messenger and all the other PC based VoIP software.

Then along comes Skype. People are signing up in droves and it is now owned by eBay. Recently I heard some hams on the local repeater talk about their Skype calls to other hams. The comment was that it was better than HF without all the noise, fading and interference. On one occasion they left the repeater for Skype in order to finish their QSO because it was more private.

I do not run Skype on my machine but my friend showed me the directory, listing all the hams (using their callsign as ID) that had signed up. I was a bit surprised to see how many fellow hams were now using this program.

My question to those of you reading this newsgroup is as follows: Talking around the world is now free, easy and noise free. Do you think Skype and programs like it (QsoNet, PC Echolink) are contributing to the demise of amateur radio?   Is the mystery or mystique of radio communications evaporating due to these programs and "out-of-the-box" radios.

I think this is the future and I don't like it!!

Roger - a "relic" ham

I know full well what a logarithm is; don't patronize me.

My point was that some otherwise ambiguous dB scales (at least one) have a
defined absolute basis.

Like Michael stated dB is a logarithmic reference-less ratio value.

You can use dB for things like amplifiers that have a gain or attenuators that have a loss for example. The gain of an amplifier can be expressed in dB because the reference value is the input value of the amplifier, which will allow you to calculate the output value but if you are speaking of a value of power or voltage by itself then you need an absolute scale with a reference quantity.

Absolute scales would be dBV, dBuV, and dBm. In those terms the reference is 1 volt, 1 micro-volt (0.000001 volt), and 1 milliwatt (.001 watt).

The reason you need a reference value is noise prevents you from measuring 0 Volts and 0 watts accurately so you need to use a small reference value in its place and so everyone agreed to use these values.

Definitions are:

dBV   = 20 * log (volts / 1)
dBuV = 20 * log (volts / 0.000001)
dBm = 10 * log (power / .001)

So for example:
 30 dBm = 1.0 watt
   0 dBm = 0.001 watt (the reference value)
-30 dBm = 0.000001 watt

Most of the time in radio dBm, dBuV, and watts are used.

   I'm not "Patronizing" you.  You were using it in the wrong context.

Given you are discussing use of the dB, I think the above leaves a bit out.
You can't use 0W as your reference because, given the definition of the dB,
you'd need to divide by 0 which, as I'm sure you know, isn't acceptable.

Hi Brenda Ann,
Ok,I got a closer look at the switch and it isn't a pot(not that I was doubting you)that's for sure.
Thank you for the offer on the schematic,I just got one downloaded.
Is there a way to test this switch(out of circuit) to see if its the culprit?
Do you think that this is even what could be causing my problem?
I did notice that if I turned the knob real fast I could get a 5-10 KHz change on the display but that's it.

Hi rEn,
I'm not seeing a lock feature on the rig or in the manual.
That would be great if that was the problem though,but I can get a a few 5-10 KHz change on the display when I turn the knob but that's it...its like its slipping in a way only everything feels tight.

Dale,
Your right,I probably shouldn't be working on it but there's no better way to learn. Plus when you don't have the money to get it professionally worked there's not much else to do.

Hi Pete,
Ok,I will put the encoder back in and check for 5 volts on the V+

terminal.
If I do get 5 volts then I might have a bad uP(what's that?)is there a
way to test that as well?
I sure hope the radio isn't trash,I would really love to run it as it
has a bunch of features non of my other radios have and I sure wouldn't
be able to afford one with these features.

Thanks for the help everyone its most appreciated

Nothing, it's just indistinguishable from a 0db signal.

In other words it's about half the amplitide of a 3db signal...

It's a logarythmic scale.

Bye.

No, without a reference, its use is meaningless. He was trying to use dB for an absolute signal level, not a ratio.

Your righteous indignation would probably have worked better if you
had provided a valid URL.

-Chuck

You are correct. That's what happens when one gets freally p*ssed off! The URL
should be:

http://w2agn.net/qrparci.html

Thanks Chuck!

Chemistry lesson for the day:

Be careful what you call the cathode and what you call the anode. Oxidation ALWAYS occurs at the Anode, and reduction always occurs at the cathode. The oxidation process results in a chemical losing electrons, and the reduction process results in a chemical gaining electrons. (Mnemonics: "oxidation" and "anode" both start with vowels; "reduction" and "cathode" both start with consonants. "LEO sez GER": Loss of Electrons is Oxidation. Gain of Electrons is Reduction.) In a cell delivering power, the ANODE is the NEGATIVE terminal--the electrons given up in the oxidation chemical reaction come out there. If you re-charge the cell, the roles of anode and cathode are reversed. You feed electrons into the negative terminal, and (with luck) cause a reduction reaction where the chemical at that pole picks up the electrons and is converted back to what it was when the battery was freshly charged.

Cheers,
Tom

I had quit following this mundane thread for a while, looking in only on occasion. I must wonder - it is being "recommended" "apparently" by "slow code" to raise the CW rates to 13wpm General and 20wpm Extra.
DUH - we "were" there already.

I've said before and I'll say it again. I'm not a "code" lover, but I've learned it and used it and sometimes listen to it. Will it save a life? Probably not - but still - the chance is there just the same as for any other mode. You use what you have available. CODE did NOT keep the crap off the ham bands, so to put it back in or KEEP it in, is sort of useless to argue about. While "I" think 5 wpm is about as easy as you're going to get - it seems far too many still cry about it. Yes, you could make the written tests tougher - but that sucks too - because in a sense - they're "not" any tougher when you're being given the answers in a book. And most of those books cover "just" enough to pass the exams - they by no means "teach" you electronics. In days gone by - you had to have at least a basic grasp of electronics to be able to pass the exams. I'm not saying you had to be a "Technician" with years of experience - I'm saying you had to know more than these books teach. At that time - you had NO clue what the FCC would ask. I've still got sample study guides sent by the FCC if asked - and they were "vague".

CODE, EXAMS - nothing will keep the riffraff off the bands. This is a lawless society anymore - people do as they damned well please. CB got quiet in many areas not due to Cell Phones - it happened long before. It happened in many places based on what I've learned - because of the garbage. Ham will be the same way if it isn't respected. We're in a NO WIN situation.

I find it amazing, people with illegal amps and radios will defend them to the hilt - like a murderer caught with a smoking gun - claiming his/her innocence. If the government agency deems them illegal - then they are - no excuses. Just like the speed laws - if the road is marked 25, that is what it is - plain and simple. If we all took responsbility for our actions - maybe things wouldn't be so damned bad. I know lots of cbers who got out of cb BECAUSE those with the illegal amps and radios "splashed" so bad, they couldn't even talk on the radio. So, tell me again - how those illegal radios and amps are helping? Hams have a rule of using the minimum necessary to carry out the communications. IT DOES WORK! QRP (Low Power) is part of the challenge! 500- 1000 watts or more - any dummy can do. If you want to be known as an "Alligator" station - ALL mouth and NO ears.... keep using that garbage. Who wants to talk to them? That is as irritating as static on an AM radio station. Listen to Channel 6 on the CB - there is a guy who constantly talks - HOW he hears anyone is beside me. I think he talks just to hear himself talk. AND being he is in the south, he has to be running some power. If everyone operated like that, the bands would be total chaos, no one talking to anyone - only to themselves. How the FCC hasn't busted him yet - is amazing.

Just my 2 cents.

L.

```

> CODE, EXAMS - nothing will keep the riffraff off the bands. This is a lawless society anymore - people do as they damned well please. CB got quiet in many areas not due to Cell Phones - it happened long before. It happened in many places based on what I've learned - because of the garbage. Ham will be the same way if it isn't respected. We're in a NO WIN situation.
>
> I find it amazing, people with illegal amps and radios will defend them to the hilt - like a murderer caught with a smoking gun - claiming his/her innocence. If the government agency deems them illegal - then they are - no excuses. Just like the speed laws - if the road is marked 25, that is what it is - plain and simple. If we all took responsbility for our actions - maybe things wouldn't be so damned bad. I know lots of cbers who got out of cb BECAUSE those with the illegal amps and radios "splashed" so bad, they couldn't even talk on the radio. So, tell me again - how those illegal radios and amps are helping? Hams have a rule of using the minimum necessary to carry out the communications. IT DOES WORK! QRP (Low Power) is part of the challenge! 500- 1000 watts or more - any dummy can do. If you want to be known as an "Alligator" station - ALL mouth and NO ears.... keep using that garbage. Who wants to talk to them? That is as irritating as static on an AM radio station. Listen to Channel 6 on the CB - there is a guy who constantly talks - HOW he hears anyone is beside me. I think he talks just to hear himself talk. AND being he is in the south, he has to be running some power. If everyone operated like that, the bands would be total chaos, no one talking to anyone - only to themselves. How the FCC hasn't busted him yet - is amazing.
>
> Just my 2 cents.
>
> L.
>

Remember the "No child left behind" policy of our educators of some years ago? What you are seeing today is largely a result of that philosophy. No responsibility, accountability or respect for others or oneself.

I worked as a radio dispatcher in the Air Force during my Sixties tour. That was the foundation of my radio experience. I owned a CB set for a year before I actually transmitted. The style was so alien and "cutesy" it made me want to barf. Then the syntheisized 40 channel rigs came out and everyone could afford one. End of CB for me.

I then went on to get my commercial ticket with radar endorsement. A year later I got a ham ticket and two years later I got my Extra. Code does not come easy for me. It was a constant uphill battle to pass the 20 wpm code test. But eventually I passed it.

Turning on the radio today, there are still some good folks on ham radio and not all of them are old timers. But a lot of the same types that ruined CB and now ruining ham radio. I can't remember the last time that I actually transmitted with my station. I'm about ready to sell it off and chalk it up to history.

Amplifiers are not intrinsically bad. Abusing amplifiers is bad. If you work
75 or 80 meter telephony, an amp is an absolute must have, especially if you
have a less than full size dipole at a decent height.

I enjoyed ham radio more when folks knew a bit about electronics. It gave us
something to talk about that we all hand in common. Ditto CW. No one had
more trouble learning CW than me, believe me. It still gives me a headache
to operate CW for more than a few minutes, but I wanted that Extra Class
ticket and that was the only way to get it back then.

WESTERN CONNECTICUT HAMFEST
Sponsored by: Candlewood Amateur Radio Association - CARA

Ham Radio gear and Batteries for Emergency Communications!
Seminars on Emergency Communications and others!

Sunday, September 17, 2006
Edmond Town Hall, Route 25, Newtown, CT Exit 10 off of I-84

Admission $5.00, Kids Under 12 FREE.
Table Set-up at 7:00 AM.
Open to the public 8:30 AM to 12:30 PM
Tables $12.50 Tailgating $8.00. (Both INCLUDE 1 admission).

ARRL Sanctioned. Talk-in on 147.300 (+) PL 100.0.
Seminars
- Software Defined Radio
- Big Batteries for Ham Use
- Emergency Communications What's a Digital For?

Handicapped Access. Ham Radio Equipment.
Batteries for Emergency Comms. Computers. Door Prizes.
Refreshments. Ample Parking. Rain or shine.

Only 12 minutes from Brewster, NY, 15 minutes from Waterbury, CT.

For information
call: (203) 938 4880 or (203) 775 1946

FS An Excellent Lunar Electronics Model 2M10-80P Solid State 2 meter linear
amplifier. This amp has a built in 11db preamp for receive and it puts out
80 watts of power with 10 to 18 watts drive.  It covers 144 to 148 MHz and
works in SSB or FM modes. It requires 31.8 volts at 15 amps. Price is $125.
Thanks, Charlie Hugg, K5MBX

Yes, we need a new set of bums who will vote our way, and pass
legislation guaranteeing every American the right to put up a
radio antenna entirely free of legal and contractual restrictions.
73,

I honestly can't tell whether you are being facetious or not, but you've struck upon my rawest nerve.

Whatever happened to personal property rights in the US? Since when can't a person do anything within reason on their own property? CC&R's were originally meant to keep people from stacking trash a mile deep or parking junk cars on their lawns in perpetuity. This is fine. When they started telling people they couldn't have a TV antenna, satellite dish or ham/cb antenna, as well as what color they could paint their house and whether they could have a tacky lawn gnome, I think they went too far. People are far too easily offended by the stupidest things these days. Grow a SKIN, folks. It's a free country (debatably).

I like the way Rush Limbaugh puts it:

"If you're offended, that's your problem."

Good luck with it. :) You'll find CW is fun, rewarding and will add to
your overall enjoyment of ham radio. See if there are people in your area
that do on the air code practice sessions. If you have an HF receiver, you
can tune in CW transmitions on lower portions of the bands.

Believe me, I'm not "knocking" amps, just the "evidenced" misuse (abuse) of
them. Yes, they "do" have their use and place. But most of those using them
"THINK" they have to "rule the airwaves" to converse. Their splattering
ruins it for ALL.

In spite of being a ham for 50 years, radio operator in the Coast Guard and an Extra, I have never been able to copy code in my head. My brain crashes after 3 or 4 characters. Take away my typewriter and I might as well be a CB'er.

I see MFJ has a gadget they claim you can set next to the speaker and read the text.

Seems like a great tool to assist the memory.

Do they work?

I just downloaded a program called GetCW and glad I didn't have to pay for it. If this works, I would like to talk to someone who can help me get it going.

Thanks,

Jack NR9Q

Yes it works if the code is well sent and the signal is reasonably strong.

>

Yes this program works. Again the code must be well sent and the signal reasonable strong. I personally think it works a little better than the MFJ code reader as you can set the filtering level.

With the free version, you must go into the setup menu everytime you start the program and specifically select the sound card. It doesn't "remember" what you set the last time or what the default is and you cannot save the setup in the free version.

From what I have read on "head copy", one needs to start hearing the group of letters that form the words not try to string them together out of individual letters. I can't do this yet myself as I don't work it enough. However I do hear "CQ" as a group and instantly know what it means without even having to think about the individual letters. And I do some contesting, I hear the abbreviation "test" as a group and recognize it as a "word" without having to think the individual letters.

Rush LIMBAUGH?!?

Do people still listen to that drugged-out loser?

New quote from Rush: "If I'm offensive, that's EVERYONE'S problem"

You may want to go here and try another free program. Some of the multimode
programs are suspose to work well.

http://www.muenster.de/~welp/sb.htm

Didn't they call the ones with a typewriter a ditty bobber or something like
that ? Didn't really learn the code or how to type but when the characters
were sent the finger hits the correct key. Not putting you down, just the
way I heard the military taught the code to some.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #32 (September 16, 2006) is now available on http://www.soldersmoke.com

Topics covered in #32:

-- HW-101 FT101 Hybrid Rigs.
-- BNC and RCA phono connectors.
-- Changing the clutch and oil on an HW-101.
-- Third order intercept rules of thumb.
-- Modular circuit boards.
-- Babbage difference engine.
-- Hardware to crack enigma.
-- Bills video of his DSB rig.
-- MAILBAG: KC2IGJ, G4GOY, WL7M, D. Gaskill, Gary Beach

Tired of listening to Led Zepplin or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

All our programs are available here.

We hope you enjoy the program. Please send us
feedback.

73 from London

Bill included rec.radio.amateur.misc in the list of newsgroups he posted the
original message to.  Since rram seems to be reserved for flames, discussion
of amateur radio is evidently off-topic.

=================================
Oh ,I see, the Professor is selling (partly illegal)CB Power amplifiers.
```

Probably no solder smoke on his premises ......just carton boxes filled
with equipment ,ready for shipment to truckers' watering holes.

Bill , I enjoy listening to your podcasts ....keep up the good work.
Just ignore the above junk seller ,who apparently is NOT capable to
produce any civilised and intelligent response.

Frank   GM0CSZ / KN6WH

I am trying to repair my radio after I got hit by lightning. I need a
special IC made by Harris
U5 located on the synthesizer board. The Harris part # for the synthesizer
board is
10085-5600 and for the IC 10085-5260. If anyone has a spare board or chip
they would be willing
to part with I would like to hear from you.
Stuart

When I was HL9ACT, mobile operation was disallowed in South Korea. All
ham radio was disallowed in North Korea.

Under FDR, amateur radio was Disallowed in America.

Every on-topic post helps rram, even if only a little bit. Keep these
posts up. I added soldersmoke to my bashpodder list, and will be
listening to the podcast to see what it's all about. Number 32 sounds
very interesting so far.

Interesting. Liberals looks at drug abuse as a victimless crime, just
people need some help, free needles, methadone, and billions in drug
counseling and counseling centers.

All their rock and roll heroes and hollywood legends are stoned all of
the time.

But when Rush avails himself to to these legal views that the liberals
have put into place...

"he's a drugged-out loser."

So what is acoustic dB?
http://home.new.rr.com/trumpetb/audio/dBexamp.html
SPL, I should say.

There it lies, x dB on the left scale.

   That is a SPL chart with the dB levels referenced to 0 dB SPL =
0.0002 �bar.

errrr,,, excuse me ...but....

<scratches head trying to see>

since when has a fraction of microBar had any effect
on an rf link using any sort of modulation ?

Sex? I didn't see any reference to sex. I did, however, look at your "blog," etc., and found the answer to my question.

You are not only a moron, but possibly a dangerous psychotic one.

You are going into the "delete without reading" filter.

No, but PayPal has always maintained that the "service" they provide is merely transferring money around, so if you have your bank charge-back something that went through PayPal they *will* dispute the chargeback, and since they can demonstrate that they transferred the money from you to a seller, it's highly unlikely the bank will side with you. As far as the bank is concerned, you sent Paypal some money and they then sent it on to someone else -- unless you can dispute *that*, you're out of luck. The bank doesn't care what "someone else" might have done with the money subsequently.

That being said, PayPal does have their own fraud protection system these days. IMO, dealing with PayPal isn't as safe as buying directly with a credit card, but it's *much* safer than sending a check, money order, etc.

And others don't like homophiles who walk around with a chip on their shoulder and get in everyone's face with their sexual preferences.

Homophilia is the other face of homophobia, and it appears that you suffer from the former malady. Stop looking at everyone else through the prism of your own sexual tension, and stop projecting your fears upon those who are different from you.

Your untrue and fearful cries of "homophobe" are a way of absolving yourself from any responsibility for your own life situation. It is the same thing that blacks do when they overuse the term of "racist," and most of us can see right through that kind of rhetoric no matter who uses it.

You, sir, are playing the blame game, but it doesn't work any longer. It's been worn out long ago. Come up with something real, or else continue to remain a newsgroup fool.

Interesting threads

What about setting up two checking accounts (main and secondary) - the
secondary is not linked to anything (overdraft, credit card, savings, etc)

Then keep a small amount in the secondary account ($5 or zero)

Now when some one sends you funds - tell Paypal to send it to the secondary
account - when received quickly transfer to your main account.

When you buy thru Palpal -- quickly deposit the required amount in the secondary fund

In both case -- keep track of things until the transaction is complete

Whatta ya think ??

CL -- been doing that for some time now

A scope on the encoder will tell you immediately whether it is working. The
mecahnical ones were much more prone to failure than optical encoders.
As Pete said, if it has +5 on it, it is likely optical.

73,
Dale W4OP

Problem is that if PayPal tries to take funds out of the account that aren't
there, YOU get charge with NSF, including whatever outrageous fee your bank
charges for NSF checks, and in some states (Idaho comes to mind) you can
actually be charged with a felony.

That could happen on your main account if you aren't careful (joint checking accounts get really messy with two folks writing checks.)

The secondary account is strictly for Paypal - nothing else.
I said open up a ligit secondary account
I said when you use Paypal to purchase
First transfer the money to your secondary account
Both the money and the account are legit and there waiting for paypal
Of course you must give Paypal your legit account humber for the secondary account

In other words - I don't want any one (not even my wife - we have separate accounts - keeps things in order) to have access to my Main account.

CL -- works so far. Crossing typing fingers.

I had the same problem with an Icom 735. The tuning knob turns an
encoder, which had stopped working. Icom no longer sold the encoder. I
found a repairman who figured out which diodes were burned out, and he
replaced them and got the encoder working again. You might look for a
good repair guy.

It's funny that when Clayton turns the encoder quickly there is a frequency change. I repaired a Kenwood R5000 a few months back that had the same problem. The cheap plastic disc inside of the encoder was slipping from the tuning shaft. I was able to super-glue the assembly back together and get it working again. If it was my own receiver, I would have probably replaced the encoder with either a Grayhill or Bourns optical encoder.

Hi Dale,
Well,unfortunately I don't have a scope(Yet...I know a scope is a must have when working with this stuff,that's why its at the top of my"Must Have List")so I am going to take a chance that the encoder is okay once I reinstall it and test for the 5 volts on the V+ terminal.

Hi Bob,
I wish that were an option,but right not it just isn't going to happen. This stuff has always been a big interest to me so what better way to learn.

Hi Pete,
Hey,I better take the encoder back apart(I had it apart once and cleaned it...there's not much to an encoder is there)I never thought to check and see if the disk with all the teeth was slipping on the shaft. I will check that before I put the encoder back in circuit.

You mention replacing yours with a Grayhill or Bourns optical
encoder...If I find that my encoder is the culprit can you just put in
any old encoder? as long as it fits the space and voltage requirements?

Here I go putting the cart in front of the horse again,I better check
the things you all have mentioned first before I do anything else.
I'll let you all know what I come up with.

Thank you everyone.

I buy components there all the time. Granted, they are not my
one-stop-shopping place, nor are they the first place I go to,
but when I'm in a pinch and need something now then they often
have very simple, common components (an opamp, led, connector,
pot, etc.)

"demise of amateur radio"? Perhaps it depends on how we define "amateur radio". If it is simply a way to communicate with others, I think you may be right. OTOH, people who have been though disasters that destroyed "conventional" communication channels know that anything dependent on the internet (whether landline-based, or even satellite-based which are still depenent on terrestial terminal facilities) is completely unreliable except under ideal circumstances.   I fear that as hams are attracted to this shiny new, easy, "free" mode of communications, our ability to use "old-fashioned" point-to-point RF (by whatever mode) will atrophy.

What's a credit rating? I haven't used credit for anything for over
20 years. Its been cash up front, or nothing.

You might not care about your credit rating but you will care when a lien is placed against your home.

And if you were as financially astute as you like to think you are, you would know that companies and the Government use your credit report to decide whether they will hire you, give you a security clearance, determine the rates they charge you...and many other issues that affect you.

Your credit rating matters.

And I also note that many of those who are bad credit risks deal in cash only...because it is the only way others will deal with them.

Ironically, your credit rating will actually be "less than perfect" then! :-)

Assuming you don't need a new mortgage any time soon, I suppose you're set.

Do you have a credit card? I know it's possible, but it sure seems like a pain to live without one these days... especially for things like renting cars.

I'm hoping it'll soon be illegal for companies to use credit reports in determining whether or not they want to hire people. I'm pretty conservative myself, and I have excellent credit, but making it harder for someone who has bad credit to *get a job* strikes me as absurd: Sure, most people have bad credit due to spending too much on HDTVs or fancy cars or whatever and *not* on baby formula and generic brand blue jeans, but even so, the humanitarian in me says it's better to let these people at least get a job and *try* to get their monetary affairs in order than keeping them jobless and forcing them onto the welfare rolls. From an economic point of view, I'd rather have individual companies bear the purported risk that those with bad credit are supposedly more likely to steal, defraud the employer, etc. than foist all those people onto the taxpayer's teat.

For security clearances looking at credit reports seems reasonable... I'm told that for security clearances at a high enough level the feds go all the way back to your childhood to dig up dirt on you that could be used in a blackmail setup.

For interest rates... well... hard to say; I can see more of a legitimate risk there than with hiring.

Hi there i just have a question. I am considering getting a kenwood
ts450sat because it's a solid radio I know and cause it's already set up for
a blind ham, a major plus to me, not to mention I already know how to use
it :) anwyay I have noticed that the ability to find mods and info has
about dried up, all I see nwo is ads for crap on ebay that bear no
resemblance to what I search for, even ham radio mods newsgroups seem to be
gone, so i taught I would ask here if someone can post a goo site or sites
that have all the mod info for all mods available to the radio
thanks

The Watchman is:
Norman P Triantafilos
KB9YGD

2634 Warren Street Lake Station IN 46405

Poor Norman, you really done it this time, sending that shit to my friends, they all forwarded it to me, it is no wonder you have no FRIENDS, your just a mean nasty old bastard that no one likes.

For a man who is 60 years of age it would seem by now you would have some sort of sense about you, but you know some people stay suck on stupid all their life, like you.

Hey just to let you know I have a copy of that picture you sent me of Don K9RRG sleeping on the train that you doctored up (very nasty) you are shamefull Norman no wonder Don took all that crap to the Verizon Telephone Company and turned it in to them, I hope they prosecute you to the fullest extent that the law allows.

Anyone who reads this listen to Norm KB9YGD on 146.520 simplex and sometimes on 146.775 repeater and in the evening 3955 he usually leaves before 10:00 cst this simplex frequency is in NW Indiana, also 27.365 (channel 36) cb that's where he truly belongs.

Poor Norman, I told you to stop sending that stupid ignorant crap to me, you wouldn't listen, only a MORON would do the things you do, I've filed a complaint to Bellsouth about these natsy pictures you send, I knew as stupid as you are you would start some kind of shit that would backfire on you.

The PCARC will see some of the emails and nasty pictures you have sent, I've made plenty of copies to pass around at the meeting, I'm getting Bernie to come so we can tell a little ditty about you, ah ha ha ha you'll be the talk of the town, that's what you wanted ain't it to be the center of attention?

it's Hammertime

Hi Clayton,

You should be fine with any Quadrature encoder. 32 pulses per revolution is about right for the type to order. As long as you have V+ and ground hooked up properly, it will work. The only mistake that can happen is if Output A is interchanged with Output B. In that case, the receiver would tune backwards.

Pete

But we need to improve the operators first.

Step 1: No more automatic renewals. Individuals must retest and
            pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Email these to President Bush and tell him you want to help with the war
on terror. Thanks.

He'd be more likely to declare ham radio a security risk and classify the
frequencies.. :)

FS: AS NEW Icom IC-720A HF transceiver. This transceiver is as new, used a
very few hours and stored. There is not a mark on it. Comes with Power Cord,
copy of the manual, and Icom IC-HM-7 mic.
This radio works, but the volumn control is scratchy and the Band
Switch/Relays need cleaning.
I have to rotate through the bands a couple of times to get it to work right
on each band.
There can not be any wear. It has to be a cleaning problem. Price is $275
plus shipping from 79602
I can send digital picture upon request.
Thanks, Charlie Hugg, K5MBX

Searching thru these usenets I see old moron Norman KB9YGD has made a real nusance of himself, he likes to talk the talk but can't walk the walk.

Norman is a general class operator who I was informed is transmiting out of band, he sends cw over and over on CB.

For a man who is 60 years old you have not learned a thing from life, your just a nasty old lonely lunatic who is in need of professional help.

FS Nice Drake MN-2700 Antenna Tuner. It is the high power version and this
one has the Drake B-1000 Balun installed. It has the sticky cabinet, but it
is in nice shape. I also have the original shipping carton and the original
Drake Quality Control Tag dated March 29, 1979. This tuner has been store
for over 20 years and has seen little use. It works great. Price is $575
plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

FS Icom IC-12AT 1200Mhz Handi Talkie. This 1.2 Gig HT is in nice working order. It has a good W&W
Associates 8.4 Volt,1400mAH Battery. There is no Charger, but you can charge it from any12 Volt source. There are some scratches on the back of the radio, but overall it is in good cosmetic shape.
Price is $125 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Download one of the programs that turns your sound card into a low frequrncy scope. You can do audio stuff, spectrum analysis, etc.
You can learn a lot without spending any money.

If you have a specific application and know what you're doing, a card that plugs into a PC can be useful. For most of us, it's not a viable option. It's a real PITA to go find the mouse and click a bunch of menus when you could have changed the gain on your standalone scope with the turn of one switch.

Next, join your local ham radio club or get friendly with the folks on a local repeater. Ask your question there. Most hams are helpful. We also have more scopes than we'll ever use and can often be talked into loaning them out. Try to borrow something like a TEK 453 or 465. They're plentiful and won't give you a hernia carrying them out to your car.

If you work in electronics, go convince the service manager that it would be a company benefit to loan you an old scope. About 15 years ago, ISO9000 made it a requirement that every piece of equipment on the production line have a current cal sticker. That got so expensive that management had all the little-used stuff pulled and sold or put in storage. I'll bet there's tons of scopes in storage that will never be used again. Shine up that silver tongue and see what you can unleash.

Rule number one...don't get in a hurry to buy something.
Good deals come along. Visit some ham radio swapmeets, club meetings

etc. I've been able to snag 2GS/S 4 channel DSOs for free. Be patient.
A silver tongue and brown nose will take you far ;-)
Try to get probes with the scope. Typically, probes will cost you more
than the scope did. Ditto for manuals.

I'd recommend a limit of $20 for your first scope. That $400 scope
will still be there later when you're experienced enough to decide if
you can use it.

If you get some experienced help evaluating the possibilities, a scope
that's not fully working can be a great deal. Just be aware that some
types of problems are more difficult/impossible to fix than others.
Older scopes are fixable...newer ones, not so much...you just can't get
the parts.
That's where the experienced help comes in.

ALWAYS assume a used scope is busted. I've never bought one that was
fully functional...and the seller anways assured me it all
worked...right!! If you buy it at a busted price, you won't be
disappointed. I just bought a TEK 7K scope with plugins. "Sure it
works.." Well, I beg to disagree. Looks like they took a busted
mainframe and filled it with busted plugins. Busted price and I can fix
it, no foul...
Get help.

I don't like EBAY for scopes. Surely there are many good deals to be
had. I just haven't figgered out how to tell which ones. Beware of
anything that says, "no way to test it." I once had an interchange with
an ebay seller on that subject. He slipped up and replied from the
corporate email of the largest refurbished equipment dealer in the
world. When I challenged his inability to test it, he vanished.
Hmmmm...wonder if it was repairable?

Unless you can get a real deal, stay away from a digital scope for your
first one.
For most of us, a DSO is a VERY useful tool in a VERY limited number of
situations. I find it mostly confusing. I use mine mostly for
troubleshooting because it gives me a digital readout of the DC voltage.
Most of us don't need a $20K low resolution digital voltmeter.
But a free low resolution digital voltmeter ain't so bad.
If I don't see the waveform I expect, I always dig out the analog scope.
I've been confused more times than I like to admit. For most GP
applications, you should get a DSO with WAY more bandwith than you think
you'll need. That often puts it into the "can't afford" category.

A fellow ham suggested I visit www.qsonet.com. Here is a summary of what I found.

Are you tired of buying or building amateur radio equipment? Perhaps putting up an antenna isn't fun anymore. Maybe straining for DX is taking too much effort. Well don't despair - there is an alternative.

You need to consider becoming one of the "next generation" hams. Communicate around the world using your computer and special "radio" software. Traditional VoIP programs like eQSO, Echolink and Skype don't make you feel like a "real ham". You need to take the next step and use the Virtual Ionosphere and the CQ100 Transceiver. Call CQ, twiddle the knobs, send CW and RTTY, use ham lingo and make contacts around the world. However, you will need a ham ticket and $89 (after the trial period) in order to use this next generation "radio" simulator.

Geez - I hope this isn't a glimpse of the future. I think I'll just keep building stuff and be a "relic" ham.

Roger

Lee-

Apparently the SB-604 matches the SB-104 transceiver. I don't have any more detailed info on it, but the SB-104 operation manual shows a "4 Ohm Speaker SB-604" connected to the SPKR jack on the back of the transceiver.

In another place, the manual indicates that the SB-104 can be connected to any speaker in the range of 3.2 to 16 Ohms.

73,
Fred

Here's what I found:

doesn't work on Win98

Bad concept too. Probably work a lot better if the interface was a cobra GLT148 and you had 40 channels. No seriously, IMHO it would work great as a virtual CB set.

Why on earth do they ask for scans of licence documents when there is absolutely no connection to RF?

Just my 2p.

Are there still any CBers left now that the sunspots are low and there is little if any "skip" for them?? In order to appeal to CBers you would have to add a linear amplifier option to the program.

>
> Why on earth do they ask for scans of licence documents when there is
> absolutely no connection to RF?

Because they want to restrict use to people with a ham license in an effort to keep out the general riff-raff. Scanning the license and waiting for approval makes it feel more exclusive and special. Once they get CW working they can even start restricting band privileges and have a nasty no-code debate on their forums!!

The "next generation" ham will think this software is great. No problems with propagation for contest weekends. The server owner can even add a little QSB and noise for those seeking a real challenge. Why not add a QSL bureau (for an extra fee) and have awards etc.

Roger

Twiddle the knobs, indeed.  $89 is a lot to spend to basically access a
newsgroup-pretending-to-be-an-"ionosphere"
>

This is definitely NOT the future of ham radio.  UNLESS, there is NO
future to ham radio.

Hi,
I am looking for a Manual(a schematic would be nice as well but isn't
necessary) for a Instructokeyer Model- IK-440

It was built by Curtis Electro Devices,Inc.
In Mountain View California

Does anybody know of a place online that one can be downloaded from or
maybe somebody could scan and email to me?

Any help with this would be greatly appreciated.
Thank you

No but there's millions of IRC and voice (skype etc) users who would be
on CB if the internet didn't provide the same thing. The CB metaphor
wouldn't be lost on them.

Positive can/case is standard alkaline cell construction. The correct
question would be "has anyone ever seen a negative cased alkaline cell?"

Once again you have the facts wrong, being old and stupid is your
problem Sugar Man.

Give me some more of your facts, I've got a nice little folder with all
sorts of facts about you that I'm saving for a special occasion that's
going to net me a great deal of pleasure, not to mention monetarily.

I love this, it's more fun than watching you get the shit knocked out
of you and off the bar stool, or arrested for child molestation.

ah ha ha ha

Norman P Triantafilos
KB9YGD
2634 Warren Street Lake Station IN 46405

Hey there old wiskey nose, just got some info on you, I love this,
seems you have really made a nusance of yourself with all the hams up
there, they dislike you and I can certainly understand, Bernie wants to
get involved with the law suit and the majority of the hams at the
club, you've really made a mess up ther haven't you,well your about to
get a good leson and I'm going to have that old shack and that Icom Pro
II along with that dirty amp your tearing your neighbors home
entertainment equipment up with, maybe I leave you that old cobra 2000
gtl so you'll have something to talk on that really suits you, my my
you've been real busy slandering my good name and my wife who fed you a
wonderful dinner.

I just happen to have copies of the slanderous and defamation emails
you have sent out to several of my friends, remember what I told you
about what goes around comes around, even Mike who is a dear friend and
a para legal wants to give me a little legal advise to help me.

it's really Hammertime...

Here ya go Norman, another one of you Anonymizing Remailers shot down,
and I did file a complaint against you. You can run but you can't hide,
these anonymous emails are going to bite you in the ass, your nothing
but a coward who hides behind a cloak.

Lets see if you'll hide on my visit, you gonna bring that Star 9MM with
you and shoot at me when I confront you at the meeting and stand before
all the members and tell them what kind of low life you are, or you
gonna try and beat me up like you have threaten me before...

it's Hammertime

"Thank you for contacting the Abuse Complaint Administrator of the
metacolo Anonymizing Remailer.

The administrator has processed your request to not receive emails from
this anonymous remailer. This remailer will no longer send emails to
theemail address(es) for which you requested a block. Note that due to
fact that Internet email can arrive at the destination out-of-sequence,
it
is possible, though unlikely, that you may receive emails from this
remailer that were sent prior to your blocking request, but have not
yet been received by you.

We again wish to apologize for any inconvenience that may have been
caused to you."

Sincerely,

-- The metacolo Anonymizing Remailer Administrator

Hi,

Does anyone here know where I can dig up a firmware upgrade binary to enable conventional mode on a MaxTrac 840? I've found that it's the HLN5569A.

TIA!

Hi:

Hypothetical situation: a PCM audio signal [24-bit and monoaural] is transmitted through an analog 3 Mhz AM carrier, an AM receiver on the other end [tuned to 3 Mhz] picks up the signal, and the reciever is attached to a device that can recieve, process, and decode the PCM audio back to analog and then send it to a loudspeaker. However -- in this theoretical situation -- the environment is filled with EMI, RFI, and heterodynes that affect all AM stations.

My question: Will the received PCM audio signal remain noticeably "clean" to the listener or will he/she notice the EMI, RFI, and heterodynes affecting the audio?

I ask because I think -- but definitely don't know -- that because the received signal is digital, it is less likely that the EMI, RFI, and heterodynes would cause noticeable auditory disruptions when compared to analog. Do I guess correct?

Thanks,

Radium

You guess correct, assuming that FEC is applied to the digital signal
before it is used to modulate the transmitter.

But you wouldn't do it that way anyway. Raw PCM is too bandwidth
inefficient. You'd use MPEG layer 2, or apt-X, or something like that
to reduce the bandwidth without noticeably degrading the audio quality.
You'd probably also multiplex several different channels (programmes)
together onto one RF carrier as well, to make better statistical use of
the RF bandwidth.

Cheers
Mike

What is FEC?

> But you wouldn't do it that way anyway. Raw PCM is too bandwidth

Isn't 3 Mhz enough to transmit a data rate of 1.06 mbps?

44,100 X 24 = 1,058,400

Forward Error Correction. Google it :-)

> Isn't 3 Mhz enough to transmit a data rate of 1.06 mbps?

Yes - but the chipsets to compress the digitised audio are much cheaper
than the notional value of the bandwidth you would be trashing with
your 24bit PCM.

Cheers
Mike

Just to add to Mike's comment, FEC works by send the same message several times- in simple terms, in the hope that one with get through correctly. It is simple to implement, your recieving system just needs to be able to identify a correct message and use it, not spot a bad message and initiate either a request for resend or applly some sort of correction method (assuming there is error correcting code in the message).

These comms are in one direction, so you don't resend a packet as there
is no way to make such a request. In practice, the codes have both
error detection and correction capabilities, so to the degree the
coding allows, the signal can be corrected with the bits that were
received. Note nobody mentioned a modulation scheme for sending this
data.

As a bit of trivia, Reed Solomon encoding was invented without a way to
decode it. That's what you get when you let mathematicians run wild.
For absolutely nothing of any value other than bragging rights, name
the guy who invented the decoding scheme for Reed Solomon. [Hopefully
this isn't wikied someplace. I did one class in grad school on error
detection and correction, and it was a pain in the ass if you get into
the theory. Implementation is quite simple.]

With no FEC, your receiver would be more prone to those errors that you
were worried about in the first place.

Just to amplify on this, anything that you can do to reduce the bandwidth of the digital signal before it's used to modulate the transmitter will help. One very big advantage is that you can wind down the bandwidth of the receiver, thus reducing the level of background noise in the system.

Why did you choose 3MHz? What's the application?

Cheers
Mike

FEC is generally used in applications where you don't have time to request a retransmission of an errored packet, and/or where the transmission path is simplex, and/or where there are multiplex receivers for a single transmitter.

If you have the luxuries of time and a full-duplex point-to-point environment, ARQ is better.

Cheers
Mike

> Why did you choose 3MHz?

44,100 X 24 = 1,058,400

1,058,400 bps requires that the frequency of the carrier be at least 2,646,000 Hz. To make it safe, use 3 MHz.

> What's the application?

Well, my application was more to do with reception than transmission.

I'd like to know what I would hear on a 3MHz AM carrier whose receiver [both the AM and the linear PCM part] is at its maximum bandwidth. The 3 Mhz AM receiver is attached to a linear-PCM receiver [once again, both receivers have the maximum bandwidth possible for them]. The linear-PCM receiver is attached to a DAC which converts the linear-PCM signal to analog. This analog signal [which was PCM] is then sent to a loudspeaker. Just to make things more interesting, the antennae and receivers are so sensitive that they can pick signals as low as .00000001 dB. Most likely, what would I hear?

It makes sense. The encoding software had to be ready to put into a probe before the launch date. Once it was up it could not be changed.

Decoding software was another matter. Since they had years, maybe even decades to decode the data, and it did not have to be real time, they could continue to work on it.

All they had to do is not loose the tapes. :-(

Geoff.

Radium wrote:
> What would these errors sound like?

An error in a PCM system would manifest itself as a difference between what you put in at the analogue input to the transmitter, and what you got out of the analogue output of the receiver.

The magnitude and polarity of the difference would depend entirely on whether the bit error was the MSB (polarity would be wrong), or one of the LSBs (the amplitude would be wrong). It wouldn't "sound" like anything in particular.

Have a look here: http://www.imdb.com/title/tt0375210/   :-)

Seriously though, I have no idea. Why don't you try it and post the results here?

Cheers
Mike

I thought all of the carbon/zinc type batteries had negative cases. The little button on the top is the positive contact for the battery and the other end is essentially flat on most batteries today with some having a stamped bottom and sides in contact.

What about the heterodyne tones present on analog AM radio? Would they
be audible on a linear-PCM receiver that receives PCM signals on an AM
station?

Easy for you to ask. I doubt any store has the device. And the
equipment required to amplify .00000000001 dB to an audible level would
take up the entire room.

So the best I could do -- at least for the moment -- is guess.

I am aware though that just because the PCM-receiver is digital does
not mean its completely immune to heterodynes, EMI, or RFI. If the
heterodyne, EMI or RFI has a waveform that sufficiently resembles a PCM
signal, it may very well be picked up by the PCM-receiver that is
connected to the AM receiver.

Physically, the digital reciever is still an electronic device and
hence it has some reception of EMI, RFI, and heterodynes. Its just not
affected as much as an analog receiver would be.

> Cheers
> Mike

I've seen that "white noise" movie. But thats more like Sci-Fi. Yet it
is one thing that gave me the interest to hear whatever is buried DEEP
in background noise.

In fringe areas, analog cell phones could be well understood despite the
poor signal-to-noise ratio. Digital cell phones in a fringe area just quit
working, or lose sync and you hear bits of other conversations.

According to Bob May <bobmay@nethere.com>:

> I thought all of the carbon/zinc type batteries had negative cases.

Most did -- but the zinc/carbon individual cells are relatively rare now. An example of the zinc-carbon ones without a negative case are the ones which were used to make high voltage batteries (even the 9V ones) were a wax ring (shaped sort of like a tire) with a zinc plate at one end and carbon at the other, with the sal-ammoniac (IIRC) in between. All of the wax rings were joined end to end by melting the wax, and this connected all the cells in series.

> The little button on the top is the positive contact for the battery and the other end is essentially flat on most batteries today with some having a stamped bottom and sides in contact.

The "little button on the top" was a metal cap over the end of the central carbon rod which was the actual positive terminal.

However, the Alkaline cells use a different chemistry (I'm not sure of the details -- but it could be looked up), and the positive terminal makes the case -- which requires a strange form factor to deal with all the equipment designed to orient the button properly as a positive terminal. A standard flashlight would not care, but most electronic stuff powered by batteries does care, which is why they continue to shape things so the button is positive, even if it is connected to the case. The common coin cells are different, because there were never any of those with the button as positive.

Enjoy,
DoN.

Sure there is. It's very close in amplitude to a 0.0dB signal. ;-)

Tim

Hi,
I have an Icom IC-290A that I am working on...The problem being that when I turn the tuning knob it doesn't change frequencies,it acts as if the knob is slipping.
After determining that it wasn't the knob slipping I proceeded to disassemble the front to get at the tuning potentiometer.
If your familiar with this unit you know that the potentiometer is continuous and has teeth that catch when you turn the knob to make tuning easier.
Now when I hook up my ohm meter to the wiper and to either end of the potentiometer all I get is an OL reading and when I turn the shaft the reading jumps around wildly. If I connect the meter to the wiper and to the case of the(I am assuming this is correct?) potentiometer I should get a reading of Zero ohms but again the only reading I get is OL.

Am I safe in saying that the potentiometer is bad?

If so how do I go about figuring out what type of potentiometer I need to replace the bad one?
The schematic doesn't tell me what value it is and there isn't a parts list or part number either.

I hope I have made myself clear enough to be understood,if not please let me know so I can try and make things clearer.

Any help on this would be greatly appreciated.
Thank you

I have some motorola gp88s that I use for two way in a motorsports application. I recently got two vx500 vertex radios that I want to use as a backup system. However I need to change the connector end on the car wiring harness in order to make this work. The accessory jack of the two radios is different.

Questions:

1. Where can I buy these connector ends? Are they called a specific name? I've found different names like x00 or s1 connector or x03. And I'm having a hard time finding a place that sell just the end.

2. Is there an adapter made to make this work? From motorola accessory jack to the vertex?

Thanks for any help

JAson

FS Alpha 87A Amplifier NICE!!!!
Non Smoker and looks GREAT!!!
I use it every evening.   And of course it will do Legal Limit and
more.
I don't abuse it, so tubes are 100 Percent!!!
ETO   Alpha 87A
I can't say enough about this amp, alot of built in protection etc.
Will be packed very well.
Price: 4200.00

Don't be fooled by the watchman, in reality he is Norman P Triantafilos KB9YGD
2634 Warren Street Lake Station IN 46405 he has many Aliases so he can hide,

I know old Norm the Nose personally, where do you think he got that name "Norm the Nose" draw your own conclusions. Scarlet Charlotte was a transvestite that Norm the Nose befriended, makes one wonder what frindge benifits ole Norm the Nose received from Scarlet Charolette, you know that old saying about the Greeks, and Norm the Nose has a Greek heritage, ah ha ha.

Ole Norm the Nose was a CBer with the handle "sugarman", or "Mr. Norm", he always talked out of band, (27805mhz on his illegal modified cobra 2000 GTL) to his girl friend Peggy Lou, imo she was a prostitute he was pimping,(yes he drove a Cadillac)Norm the Nose was an alcoholic who stayed drunk most of the time, he lost his license to a DUI in Lake Station,In.

Mr. Norm had a wife once upon a time that was , imo she was undesireable, couldn't keep her hands off of ole Norm the Nose friends when they would go on an alcoholic pill popping binge, she had a daughter that old Norm the Nose had a little trouble with, draw your own conclusions too.(it's on record).

Now ole Norm the nose is a memorized no code Ham with a general license fouling up the airways, you should have stayed with cb it was more fitting, Norm the Nose would get drunk and use the lowest of langauge, cb ops would taunt him all night, he would cuss and spit in the mic, the stuff Norm the Nose said would make a sailor blush, he would talk about boogering CBer's in the rectum, the worst of sexual acts toward the good citizen band ops, some were female ops that couldn't defend themselves, but he didn't care it was the alcohol and pills that drove him.

That's it for now but more to come!!! next I'll expose his arest record, ah ha ha (when you have skeletons in the closet what goes around comes around)

it's Hammertime, ah ha ha.... (it's not slander when it's the truth)

I have decided to sell my Icom IC-781. It is in excellent condition and comes with the manual and the handles. Also, I have installed the Sherwood Fan Kit to keep the power supply cool. It has a very bright and clear display. It is all original and has never given me a single problem. It has low hours of use. Pictures are available upon request. Price is $2100. Thanks, Charlie Hugg, K5MBX

AMERICA IN DANGER of its own out-of-control Bio-Terror:
                    Is 1984 here?         God help us, blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in
U=2ES.A.

       Our government needs TORTURE in U.S.?         See details
below...
       It has your VOTE, support? Abused...

CRITICS (political/social/cultural) are harassed and secretly
persecuted
along with their KIDS in schools/colleges, especially, during
tests/exams
(Think: Guantanamo "stress-positions" in the context of
1984-technologies)

Bio-Aerosols and aerosolized chemicals are used to cause:
      - severe colds/coughs turning into bronchitis, eye irritation
      - bacterial pneumonia/other pneumonia, shortness of breath
      - surges of severe headaches, migraines, dizziness, etc.
      - fainting collapses by symptoms-mimicking aerosols
      - severe stomach pains (sharp, burning, nausea, etc)
      - chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
      - heart attacks under cover of second-hand smocking
      - car crashes/accidents by Vertigo-causing aerosols
      - liver/organ failure by small-dose toxins (trace-less?)
      - cancer-causing/facilitating - months-long assasinations
      This "Yushchenko syndrom" CAN destabilize NATIONs
      Waste, Fraud, Cronism and Abuse in HomeSec/FBI

U=2ES. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!
```

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and Post*
Fabrication of Fear to grab Power by Fabrication of Believable Info

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA) and other places. Highly volatile aerosols with and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=3Dkrd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As a former NASA Langley scientist working in the area of nanotechnology and nanoscale particles, I have been recently exposed to the establishment of secret gas-aerosol rooms inside of United States, at least in the Mid-Atlantic region (from Philadelphia to Virginia). First, the highly irritant aerosols have surfaced at the NASA Langley Research Center in several safety accidents. Investigations were blocked, probably, because of lack of Congressional approval for such financially-lucrative research at NASA. Later, these aerosols had been encountered outside of NASA in Virginia, Delaware and Pennsylvania
.
This points out to yet another proliferation of originally-sensitive technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture,

extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

-------------------Full text of an ad from Philadelphia's philly.com-------------------------

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and landlords, who get financial/material or other incentives. US citizens and kids are victims.

Torture is any act by which severe pain, whether physical or psychological, is intentionally inflicted on a person as a means of intimidation, deterrence, revenge, punishment, sadism, or information gathering. At times, medicine and medical practitioners have been drawn into the ranks of torturers, either to judge what victims can endure, to apply treatments which will enhance torture, or as torturers in their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

     America in danger -
The vice is NOT impeached.
     America in danger -
The public trust is breached.

Big Brother spins protection
    And fear is used to clamp.
Democracy needs action!
    On which side do you stand?

   Which side are you on, boys?
   Which side moves you on?
   Which side are you on, girls?
   Which side did you wrong?
                    (Chorus after F. Reece)

Your church is burned by haters.
       The priests to go to jail?
Your dreams are cheyned by traitors,
       But hope still shines through veil.

Dust rooms came back to gas us
       With neo-Naz (or Con) embrace...

New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

V. Haryk-Bukovynsky   =A9 VMH

My brother-in-law was a radio hobbyist and passed away a few months ago. I am helping my sister sell his equipment but I am not very knowledgable and I want to understand more so I can get what it is worth for her. He had no life insurance and she has two children to support. I am worried that I will not describe the equipment fully and not sell it for its true value.

He had several Icom IC-W2A hand-held radios. From what I've read these are fairly old but I think they may be desirable because you can enable them (via the keypad) to scan a wider range of frequences (800 ~ 900+). I think that newer radios have this capability disabled? He also had an AOR AR 1500 that I think has similar unrestricted RX frequencies. Is it legal for me to advertise these exteneded ranges on Ebay listings? There seems to be some secrecy to this kind of thing as I try to research it.

The IC-W2A radios can also be set up as as dual band repeaters. I don't really understand why you would want to do this unless you are providing a repeater service to other people? This seems odd for a hand-held radio.

I have also seen mods for these radios that enable MARS/CAP. He was a very accomplished electronics technician so I would expect he has modified these radios. Besides taking them apart, can I check to see if they have been modified some other way -- maybe tuning to a particual frequency and listening? Again, is it legal to advertise this feature if they have been modified? There doesn't seem to me that there would be much activity on Military Amatuer and Civil Air Patrol but there seems to be a lot of references to MARS/CAP modifications around. He had an Icom IC-207H with a label of "MARS/CAP" on it. It was on his bench and connected to one of five large roof-mounted antennas. I think this was probably one of the radios he used the most. Are there other mods I should look for on it?

He had several GMRS hand helds (Radio Shack and Maxon 210+3) and CB radios (Radio Shack and Uniden). Is there any unique enhancements I should invesigate on these? The Maxon 210+3 radios (he had several of these) also are older models but they push 5 watts. Is that unique to the older radios? Since he had several of this one model I think there must be something unique about them.

He also had a Magnavox D2999 PLL World Receiver. He had modified it for an external (roof mount) antenna. I was thinking about re-connecting the built-in antenna on it before selling. Anything else I should look for on it?

I would appreciate any help or advice you folks can provide. If you have any questions or any tests you can walk me through on these radios I will be glad to give them a shot.

Thanks,
Twiddler

Being relatively new to ham radio, I am considering some form of oscilloscope. I am intrigued by PC-based systems (eg., BitScope Pocket Analyzer)

I've read a few NG posts about used HP scopes and a few negative remarks about PC scopes.

My question:

Given my neophyte status and the likelihood that I would use a scope for anything more the basic / with learning, moderate/ complexity,
... is the PC-based scope a good choice for me?
Cost is under $400, not incl. a $40 analog probe.

John

Geez I bought an almost new 50 MHz Tektronics 2225 for $35 and that was with probes. You can get a decent bench scope for not much money.

You don't say what you want to measure with a scope, and it is very important with a digital storage scope.

Nyquist's theorem says that if you are sampling at 2x the highest frequency present, you can determine that frequency. My experience with digital storage scopes is that you want at least 5x the sample rate and 10x is better to look at a waveform. As a result, a 20 MSample/sec scope is useful up to 2 - 4MHz of input bandwidth. Beware, some of the digital storage scopes specify a "repetitive sweep" bandwidth that is equal to the Nyquist rate. If you are looking at a repetitive signal, you actually can approach this rate. If you are looking at a one-time or rare event, the usable bandwidth is much lower. Exceeding the bandwidth of an analog scope gives you a distorted view of the amplitude and possibly the waveshape. Exceeding the Nyquist rate on a digital scope becomes outright deceptive in amplitude, waveshape and frequency.

Unless you need a DSO, I would suggest you look for a good used analog scope. Tektronix made some really nice analog scopes and the 465 is one of the best. HP's analog scopes were always a disappointment to me, but their digital scopes are first rate. As a solid scope, for learning and genearal utility, analog scopes offer a lot more bang for the buck.

Good Luck,
Bob

Wes,

1) You still got this?
2) Will you ship USPS, as I can't receive parcels any other way?
3) You take PayPal?

The e-mail is good.

For Sale: HP3586B Frequency selective level meter VLF receiver

>
>
> This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By

rec.radio.amateur.homebrew:6790 rec.radio.amateur.equipment:6023

This evening the GF noticed that the remote control wasn't working &
was hot.
I pulled out the extremely hot AA batteries.
It looks like the spring contact in the remote control, on the
negative side had worn away the plastic covering on the side of the
battery & shorted the side metal battery casing to the negative
contact, thereby causing the overheating.
In my many years of battery dissection, I've never seen the side
casing of a battery being positive before!
These were "Golden Power" alkaline batteries, made in China.
They were the original batteries that came with the remote (for a
Shaw digital cable box).
Anyone ever seen a positive case AA battery before, or is this a new (
dumb) idea?

oops..my mistake ..it looks like Maxell amd Ikea (made in Germany)
alkaline batteries are all the same..a positive side casing.
When the hell did they stop making the old negative zinc sides?
Only with Alkalines? What a PITA!
My apologies.

BTW: Ikea batteries come from Varta. Better price than original Varta labeled and the technical performance is good. Duracell is better - even useable as AccuCell.

I've seen many Alkaline batteries with the outside casing connected to
the 'tit' on top as the positive and the bottom flat connector was
insulated from the body of the battery. alkaline batteries have
different chemistry from carbon zinc resulting in an inverted
construction. This may actually be the norm, but in the larger sizes
the plastic outer wrap hides the details.   Just looked at a DuraCell
"D" and it is of the inverted construction, but the insulation of the
battery bottom (-) terminal from the case of the battery is hidden
under the plastic wrapping.

The Life & Times Of A Looser...

Ah ha ha... I think that you are talking about yourself...sounds like
you are the guy that did all that stuff and now you are feeling guilty!
Hameertime is a small minded bigot who is in search of himself yes he is so
insecure.And dont be fooled by his alias of hameertime he is in fact James W
Rogers   270-825-3503

65 N Russell Dr
Madisonville, KY 424315854

He is so ignorant that he posted to the usenet with his wifes (maria rogers
mariablazer2002@yahoo.com) yahoo email account.All his life he has been abused by
people parents included it seems this is why he is the way he is today.. a person
to be pitied.K9KXQ is his amateur radio call sign and he give so many people in
local government a hard time that they run him and the rest of his unschooled
bunch out of the city of hobart indiana yes its true he was the laughingstock of

the airways for miles around.No one liked James Rogers when he was a cber in hobart indiana called JR because he would get so drunk and was high on drugs he got from his old cb buddys and liked to throw carriers on any one he could while they were talking.James has a retarded brother named frank and they had a bunch of other lowlife scumbag freeloaders move in with them at 1040 rand street in hobart indiana but like allways they just couldn not pay the house payment and lost it...the rogers would move from one house to another several months after moving in it was their style...ya know typical ignorant southern trash.It will be only a mater of time when James Rogers gets run out of madisonville KY to... His old friend Mike got a sexchange but broke Jims heart when he/she moved to California so now he lost mike and scarlet to and was heartbroaken...But as things were he had gotten fired from the e.j.&e. railroad in gary indiana and went to work for the IHB rr where at lunchtime they would go to a tavern downtown and there he met his wife and they both being lowlife scumbags and of course both hardcore drug users and drunks for many years hit it off fine.Its funny how this guy and his family lives all they want is something for nothing and to cheat someone out of something...Its their way of life like a bunch of traveling hillbilly gypsies ah ha ha ha.. and how this guy did some of the hams up in indiana is another story for chapter two of the JAMES ROGERS SAGA....Be sure to read Part #2 all you USENET users!

Since it's the cathode that gets eaten in whichever reaction is used for the
battery type, it might make sense to have the anode as the case.

I could have done with this 25 years ago when I got sent abroad for work for
three of months and came back to find that the transistor radio batteries had
leaked all over one of my (expensive) loudspeakers :-(

Hi,
I am looking for a schematic for an Icom IC-290A
I have the manual but it is short the P.C. Board Layout and the Schematic.

I was wondering if anybody knows of a place online that I can download the schematic or might be able to send me one via Email?

I would like to have the P.C. Board layout as well but it isn't a must.

Any Help would be greatly appreciated
Thank You

Poor old Norm the Nose,(KB9YGD) no one ever liked you, they all made fun of you when you were in your drunken stupor, you remind me of the drunken Southern Hillbilly that pulled your CB radio through your window and made off with it, is there such a thing as a Greek Hillbilly? if there is you fit the description

I don't know about Mike, haven't seen him/her in 10 years but you seem to know quite a bit about he/she I've got a pix of you with him/her dressed up as a woman at the PCARC meeting, you two are very close in that pix, from what I understand you and he/she went to these meetings together all the time, I never seen Mike/Michelle at those meetings when I went, only after he became a she accompanied by Norm KB9YGD

I hope you have at least changed your habits of hygiene or do you still stink like a rotten sewer especially from that hole in your face called a mouth, take a bath and give the good people of PCARC a break from the stinch of your bad body odor that oozes from your presence.

Got your coax cut did you, and the Lake Station Police were called out to cite you for interference to your good neighbors entertainment systems, my my, the good neighbors have had enough, they are walking the streets on Vigo,Vermillion and Warren getting a petition signed to get you out of the TV's, phones and stereo's, you are a bad man and no real ham, only a "real pig".

have a good day, I am. ah ha ha ha

there's no time like Hammertime

Just bought a cosmetically nice TS-520. Unfortunatly it had
been converted to 11 meters, and the original 10 meter crystals
are gone. If anyone is parting out a TS-520 (any version), or
TS-820, I'd be interested in buying these crystals or the whole
board. TIA

                                   Steve

++++++++++
Fire Chief was the regular grade sold by Texaco. Their premium was
Sky Chief.

In the 1950s, Sunoco sold only one grade of gasoline, which was
supposed to be a "near premium". Its gimmick was that it was dyed
blue, whereas other gasolines were yellow to red. In the 1960s, its
super-premium was Sunoco 260 from the "custom blend" pump.

+++++++++++
I know a Tech who refuses to attempt to upgrade until code is dropped.
Yet he claims to have "very conservative values". He also believes
that hamfests should carry more non-amateur radio related things, like
old movie VCR tapes and Glenn Miller recordings.

He refuses to attend any amateur radio club meeting or gathering. He
wanted to have a non-amateur radio related picnic gathering of radio
amateurs on the Saturday of Field Day.

Nobody around here considers him to be a ham. We consider him to be a
"CB-Plus".

I am looking to purschase a Cobra 148 GTL that was made in the
Philippines. Please feel free to contact me at copdoc1@optonline.net
I would need to know the S/N number and Date of Mfg.
Thank you

Peter

Ever hear CW on your scanner?

Sound neat, don't it.

Hey,

This thread is about CW and ham radio.  You no-codes stay out of it.
Go find some CB'ers on 11 meters to listen to.

Do you listen to amateur radio repeaters on your scanner?   Yes?

Well talk to Mark. He can tell you how to become a no code Tech. He is an
expert at that because he's been a no code tech forever.

73, Happy to Help

Sweet Jesus!! Man, are you crazy??? Do you know how many hammies are gonna
see that and
what kind of search and rescue operation you've started....
Now lives will be lost and thousands of dollars wasted because of that
little trick.
I hope you're proud of yourself.
rb

Actually, in all seriousness... my advice is to never put a d-cell maglight
in your front pocket on a 3am call.....
No good can come from it.

Piggy-backing off this thread, please: When I was an EMI technician some years ago, we used conductive anti-seize on (most) hardware that was in a conductive path, such as grounding straps. I was surprised to discover that some/most anti-seize is non-conductive; you can daub some kinds on the benchtop and stick ohmmeter probes in it -- nothing happens. I figured with its metal content, surely it would all be conductive, but not so.

I have no idea what implications this has for the OP's Butternut and would welcome comments.

Yes, but he has a point - the original person posted this same request
on a VK board on the 24th, was pointed towards mods.dk, but still
keeps on asking the same question!

I think he wants someone to do it for him........and burn a CD, and
mail it to him.....

Andrew VK3BFA.

I got a tube of GB Ox-Gard OX-100 to coat the sections of my Butternut HF9V vertical as I assemble it. I looked on both the tube, the packaging, and the GB website, but none of them indicate whether the product is silicone grease based or petroleum grease based. Does anyone out there know ???

Soak a bit up with a piece of paper or cardboard and light it with a match, and you'll have the answer in seconds. Petroleum based grease will burn like crazy but silicone based grease won't.

But why do you need to know?

FS: Icom 7000 HF Transceiver
Used only a few times, LIKE BRAND NEW!!!
Wasn't mobile. Have all the packing and original box.
Warranty card iin it as well. You couldn't tell the difference
from a new one to this one.
Still has the plastic on display.
Price: 1100.00

FT: Kenwood TS-950SDX HF Transceiver
I have all the packing, Original box/Manual/Service Manual/Etc
Works and looks VERY NICE!!
I'm open to trades or offer.   Its a nice one!!
I'm interested in all types of Ham gear.
Please don't ask what I'm looking for.
Just tell me what you're will to trade for it.
Ready to sell or trade today.

I recently got a tr-2200a that wasn't suspossed to be working. The

batteries are totally bad. I just wired it into a 12V car battery and
it works great. I'd like to know where to buy crystals and how to
change them.

thanks

Go here and look for the Heathkit you want.

http://bama.edebris.com/manuals/heath/

Seems to be about a 14 meg download for the hw100. The SB series is almost
the same rig except for the VFO .
YOu might look at the sb-102 as I think it has a few improvments such as a
hotter tube for the first RF amp in the receiver.

Manual is available at http://www.mods.dk

more specifically, at http://www.mods.dk/index.php?ListManuals=kenwood

As far as getting crystals, any of the old reliable crystal manufacturers have the data to provide crystals for the frequencies you specify. I used ICM (International Crystal Mfg) since the 60s, but gravitated towards Sentry Crystal Mfg. Co in years later.... I think I preferred the accents of their Southern Bells <G>. In either case, they provide quality crystals, and there are many other sources too.

So who are you remaining five guys going to talk to?

BTW, I didn't know we lost ham radio and need to take it back.

Blow Code, think before you type will you? You spend entirely too much
time on the computers. Get on the radio and talk to all the old timers
on CW will you? They are lonely and need you there.

his idealogy lostcotrol of Ham Radio completely about 20 years ago with
the introduction of the No Code license

he is going to whine for another 50 year or till he drops dead
>

thanks for the info. I'd already downloaded the mentioned file. It was not what I wanted. That file is a 2200G and mine is the 2200A. There are enough differences to make a difference. I don't have a tone knob on the radio but in the mods it says you can put a resistor pair in and achieve it.

thanks

Correction, Mark, Blow Code likes lots of BS.   :-)

He also wants lots of attention and might want to be the successor to that military impostor Robeson.

>> BTW, I didn't know we lost ham radio and need to take it back.
>
>his idealogy lostcotrol of Ham Radio completely about 20 years ago with
>the introduction of the No Code license

Actually 16 years ago (1990) but the movement to end the morse code testing for AMATEURS had begun much earlier than that.

Prior to the opening of the Internet to the public in 1991 the ARRL could retain attornies in DC to promote Hiram Percy's ideals of morsemanship. [paid for by ARRL members] However, no-code-test advocates did manage to get their Petition into the NPRM stage in 1990. That passed into LAW in 1991 and the rabid morsemen have been frothing at the mouth over it ever since.

Interestingly enough, the ARRL had to retain a lobbyist organization after the Internet went public...in addition to the law firm on retainer. [also paid for by ARRL members] The competition for the FCC's ear had grown now that amateurs could "talk" to the FCC directly instead of being filtered through the ARRL. Rightly so since the ARRL membership has never been more than a quarter of all licensed US radio amateurs. Democratic principles in action for this republic, not the monopolistic pseudo-"representation" of a minority group organization.

>he is going to whine for another 50 year or till he drops dead

Has Blow Code ever identified himself by callsign?

Blow Code is more likely just one of the 'others' under a new pseudonym. Either that or the pro-code-testers are just all parroting the ARRL dicta (or is that "papal encyclical'?) from the Church of St. Hiram in Newington.

>> Blow Code, think before you type will you? You spend entirely too much

>fellows for whom Narrow Band OOKed RF causes brain problems

My take on that is the monotonic beeping did it. :-)

Rabid morsemen reject all communications outside of their very tight little RF spectra and sing praises of their very narrowband mental viewpoints. Maybe that's what they think is "intellectualism." :-)

Or, it may be some undiscovered malady in their brain which also keeps them from advancing beyond their mental youth. They can't think "outside their box" but then few morsemen can think inside the box containing their radio circuitry. It seems that anything other than their twitching fingers carressing their code keys is some mysterious, alien "force" in those radio boxes, a deep mystery to them. The signs pointing to that are their inability to talk technical other than parroting (again) the ARRL information spoon-fed them. That lack of self-confidence or insecurity may lead to their defensive "we are better than you!" shouting about their beloved psycho-motor skill of morsemanship.

Gotta love their LACK of technical details, all the time praising to the skies of their narrowband signals yet an almost utter lack of understanding Shannon's Law, the universal relationship of message rate, random noise, information error, and bandwidth. Maybe they can't THINK faster than 20 to 40 words per minute? :-)

US amateur radio appears to be quite alive and well today. That despite the ARRL's insistence that all amateurs should emulate the standards and practices of the 1930s. Instead of trying to take a neutral, hands-off policy on code testing, the ARRL ought to look at itself and the reason they can't get membership from the three-quarters of all amateur licensees in the USA. That majority IS the future of US amateur radio, not the frozen-in-their-youth delusions of some olde-tyme morsemen.

the problem with makig an ID is that so many of of tem were stamped out
of the same warped mold

   I doubt it.  Robesin has a peculiar format in his text and shouts
   denigrations to others too much.

That mold isn't so much warped as just OLD. It was fine in 1930
but 1930 is 76 years ago.

> > >> Blow Code, think before you type will you? You spend entirely too much

it is warped if nothing else from doing that muchstamping even if it
fit all though years ago

indeed I supect it bent abit some 30 years when it tried to put it
stamp on ME

FT: Kenwood TS-950SDX HF Transceiver..
I have all the packing, Original boxes/Manual/Service
Manual/Microphone/etc
Works and looks VERY NICE!!
I'm open to trades or make offer.     Its a nice one!!
I'm interested in all types of Ham gear.
Please don't ask what I'm looking for.
Just tell me what you're will to trade for it.
Ready to sell or trade today.

JDB, You're back.

Did you get tired of playing with your model Cho-Cho trains? You could try stamp collecting for something else to do, but you might not be smart enough to figure out what side of a stamp to lick.

Sc

I have for sale from an estate a Ten Tec Scout with the 40m and 15m modules. Also included are the following: cables, mic, manual, 607 keyer paddle, 937 power supply, mobile mount, and 1203 dummy load kit (I haven't found the instruction sheet for the dummy load kit). It appears that the radio and accessories have never been used. The cables, mic, and mobile mount appear to be in original packing. I believe that it has the noise blanker installed as the instruction and installation instructions for the noise blanker are included. I would like to sell the entire package, if possible. I'm asking $450 for all. If interested please contact me via email or telephone at 972-231-7511. I'm in the Dallas, TX area. If you are in the Dallas/FTW area or reasonably close I would be pleased to meet with you and let you inspect the items.
Thanks...Fred Z. (W5HTR)

I have a Dentron HF-200 5 band rig. It is a bit of a basket case, as someone took it apart, but it seems to be all there. I need a manual, schematic, whatever for it so maybe I could get it going.

I have two Motorola SyntorX9000 lowband mobiles.
30-50mhz 110 watt with dual control, complete.
These units can be converted to work on both 10mtrs and 6 mtrs with the
proper software. I can NOT program them. I'm looking to sell or trade these
units for any reasonable offer.

I'm looking for:
VHF Spectra 110watt A9 Head
VHF Spectra 50 watt dash mount.
VHF Spectra 50 watt remote mount.
Yaesu FT8900R quad band mobile
FT8800R dual band
Alinco DR605TQ
Or similar equipment. Equipment must be complete and in good working order.
Please email direct

Yep, none of those references cover the HF-200. No schematic, no info.
Just the MLX-mini, which I also have a working version of.

I won't suggest stamp collecting for you Mark. You would probably whine that the little boxes where you paste the stamps are too small and you won't go any further until the post office makes bigger boxes, and that the problem is the big stamp collectors want stamp collecting to be like a frat house and squeeze out the little guy.

Sc

well stamp collecting is one of my hobbies as it happens

but you it seems will always be the hate filled bag of bile that show yourself as much like Wisemen and Robeson and Heil

For Sale: HP3586B Frequency selective level meter VLF receiver

This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, there is an RF output jack on rear which enables you to sweep filters etc.

The service manual is included.

$495 plus shipping from central florida

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal input, 4kHz to 1MHz frequency range with 135ohm balanced Input

  "Paul Hinman" <paul.hinman@shaw.ca> wrote in message =
news:aLfEg.400583$Mn5.137675@pd7tw3no...
  I frequently see postings in the ham radio related newsgroups for =
items currently being offered on E-Bay.

  All to often I that items will be shipped only to the lower 48 states, =
leaving hams in Hawaii, Alaska, and Canada out of the picture.  What is =
the problem.  In Canada we are well served by FEDEX and the United =
States Postal Service.  Amateur radio equipment crosses the border with =
out any problem.  I realize that Hawaii and Alaska may be a bit far from =
the  "lower 48" but the same delivery services are available even though =
surface transportation may be a little bit slow.  In the US you also =
have UPS, the folks in Brown which we Canadians prefer not to use =
because the often make the border crossing more difficult than it needs =
to be and we don't like getting stuck with brokerage fees.

  So why the discrimination, if the buyer knows that delivery may take a =
little longer and is prepared to accept the fact then it becomes a non =
problem.  If the seller is intimidated by the prospect of complicated =
paperwork, he needn't be.  Please leave it up to the buyer to decide =
whether he wants to bib or not.

  I can not speak for shipments to Europe, Africa, India, China, or the =
South Pacific but for fellow Americans, or friendly northern neighbours, =
I think that people should be prepared to deal with us.

  Thanx for letting get this off my chest and I realize that I have =
cross posted this to four different newsgroups but I wanted to get to a =
broad audience.

  Paul

Hi,
Many Thanks for reading this request,
Can anyone provide me with a copy of the instructions for a Microwave Modules MML-50-100 50MHz (6m) linear amplifier.
I have just bought one 2nd hand which didn't come with the usual (if anything like the 2m linear amplifiers I've owned) single page instruction sheet.
Principally I would like to be sure of the power supply requirements, fuse ratings etc.
So if anyone can oblige I would be very grateful.
Many Thanks
Robert GM0CSN

I have a very nice Collins Winged Emblem 312B3 Speaker for sale. It is at least a CCA Very Good. There are a few very small nicks on the top of the case that are hard to see. Otherwise is would be Excellent. It is all original and sounds good. Price is $175. I can send digital pictures to interested persons. Thanks, Charlie Hugg, K5MBX, CCA#307

```

I will pay top dollars to anyone who has one or a commission for any
referrals to someone who leads me to one. Looking for one in excellent

condition. I have most top Sony SW radios, and this one is missing in
my collection.

Thanks again

Ivan

I understand it fully

no rebuttal is posible since it is true
only weak and insecure hams feel the need to put down CB

1: No more automatic renewals. Individuals must retest and
    pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

might be a good idea but only if we go one class of license o make
deffernt test to renew
>
>
> 2: The passing score for written exams needs to be raised to 85%.
mayebe ok
>
>
> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.
killing the service off
>
>
> 4: Make the no-code license one year non-renewable.
and cuting numbers by 50percent insuring the end of the ars within 10
years

5.   No more "multiple guess" code test.  One minute solid copy with
lots of numbers, punctuation, and intentional misspellings

6.   No more VE sessions.  Re-establish testing at FCC Field offices,
and train test administrators in the mold of Jules Finkelman.

7.  No more pass the theory one day, the code another day.  If you
expect to be a ham, you should know both the same day.

8.  No more transceivers.  Separate receivers and transmitters,
preferably with tubes, that you have to tune separately.  For first
year of license, crystal transmit frequency control only.

9.  Fill in the World Trade Center hole, re-establish the old grid of
streets, and re-establish radio row on Courtlandt Street.

The council of VECs has already eliminated the multiple choice test. Now
it's fill in the blank or get solid copy.

Why? Is Amateur Radio a memory test? Make it a lifetime license and
reduce the FCC's workload.

> 2: The passing score for written exams needs to be raised to 85%.

Why not 100%? Are you saying it's ok to screw up 15% of your operating?

> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Why should anyone be tested for code proficiency if they don't plan to
use it? I can see testing for basic knowledge (dit dah = A), but why
any particular speed? Should people be tested for speed talking before
using voice modes?

> 4: Make the no-code license one year non-renewable.

All licenses should be no-code. Does the FCC test for speaking ability?

I don't think you have thought this through very well. Go take a nap
and come back after some extended cogitating.

Bill, W6WRT

They don't make a counter that goes high enough to number all the
Freaks on CB.

Hi all,

I find myself in need of a 6 meter mobile antenna. I intend to use it for SSB at the low end of the band. I have no interest in 6m FM or repeaters. It must be a whip antenna rather than a loop for aesthetic reasons (XYL would kill me if I installed a Squalo on the truck!). I don't care about cost. I'm flexible on what type of mount is required. I presently have a 3/8"-24 mount installed, but it's easy to change to NMO, UHF, etc. My previous 6m antenna was a helically-wound piece of junk from Iron Horse, which literally fell apart. I want something that is built well and will last. My mounting location will be the right rear corner of the aluminum toolbox on my F-150 pickup.

I'm interested in hearing about YOUR personal experiences with 6 meter mobile antennas: what worked well for you, and what did not. I am not interested in "My buddy says..." or "I think I read somewhere...", 'cuz that's worthless hearsay. I wanna know what worked for YOU.

Thanks and 73,
Dean K5DH

The only thing I have ever used for 6-meter mobile is a full-size (54") whip. I have tried loaded antennas, but you just can't beat a full-size whip. For many years, 6-meters was my only mobile band. We also had weekly transmitter hunts on 6-meters. With that said, most SSB work is going to be horizontally polarized, so you would be better off with a Squalo.

I am using an Antenna Specialist "disguise" type cowl mount whip that I cut for 6 meter FM. These antennas were quite popular in the 70's when police agencies used the VHF low band frequencies. I use a Standard tri-band (6m, 2m, 70cm) in the car which runs 45w,50w,30w out respectively. I have a single coax connection on the back of the radio which goes to a diplexer that sends the 6m transmit to the cowl mount antenna and the 2meter and 70cm, signal to a dual band antenna on the roof. The dual band antenna is a low profile cellular look-a-like antenna, so at first glance it appears I have an AM/FM antenna and a cell phone antenna mounted on the car. The 6 mtr antenna works fine and the performance is what you would expect from a 1/4 wave whip.

I know you didn't want any second hand stories but I have friends who have successfully used Larsen 2 meter 3db base loaded antennas on 6 meters. Interstingly enough they turn out to be resonant on 6 meters as well as 2 meters. If you are looking for an NMO antenna, that would be the way I would go. You could essentially be getting a "dual band" antenna for the price of a 2 meter base loaded antenna.

Andy

Go down to Rat Shack and get you an 8 ft stainless whip, pop the ferrel of the end, cut it to the correct length, then silver braze the ferrel back on it. It worked for me.... now that whip is on top of my Tarheel screwdriver antenna :-)

Ok.... and lose 99% of the available operators when another Katrina hits..... We needed *ANYBODY* that had a radio and a license for almost a month after the storm. My town took the direct hit from Katrina..... even though we are 60 miles north of the gulf, I still had 110mph sustained winds at my house.

you can't lose half the ops as you propose and survive as a funtional
gruop

it is just that simple

========================================
Suggest you go to    www.mods.dk    select manuals  select Yaesu  You'll
find manual and circuit diagramme somewhere down the bottom of the list.

Unless you support the site financially you can download ONLY 1 document
  each day .

Good Luck

Frank   GM0CSZ / KN6WH

My Larsen 2M 5/8 wave whip has a good SWR in the 6M band. I haven't used it
to operate 6M mobile because I don't have a rig for that in the car.

Nice older 2-meter multimode. CW, USB, LSB, AM and FM transceiver.
Min. 10W output. I've used this rig with external amps to run meteor
and tropo scatter and EME.

Been keeping it to get back on EME but health issues are preventing
the construction of new antenna.

Asking $150 plus actual shipping costs.

email:n7ws@yahoo.com

Thanks and 73,

Wes

Amateur radio is in decline and you think putting Morse code back in as a requirement would help?

Bwhahahahaha.

Statistics courtesy of George McCouch, K3UD.

Total active individual licenses as of May 14, 2000:
Novice - 49,329
Tech/+ - 334,254
General - 112,677
Advanced - 99,782
Extra - 78,750

Total all classes - 674,792

Total active individual licenses as of June 30, 2006:
Novice - 24,877 (-49.57%) (-24,456)
Tech/+ - 320,242 (-4.20%) (-14,012)
General - 132,758 (+17.82%) (+20,081)
Advanced - 71,753 (-28.13%) (-28,029)
Extra - 108,184 (+37.38%) (+29,434)

Total All Classes: 657,814 (-1,405 since the March 2006 reporting period)

Total all classes (5/14/00) - 674,792
Total all Classes (4/21/03) - 687,860
Total all classes (9/6/04) - 674,788
Total all classes (6/30/06) - 657,814

Total loss of 16,978 since 5/14/2000 (Was 674,792)
Total loss of 16,974 since 9/6/2004 (Was 674,788)
Total Loss of 30,066 since 4/2003 (all time high of 687,860)

We lost:
842 Novice
1,088 General
1,157 Advanced
3,087 Total

We Gained:
1,258 Tech/+
424 Extra
1,682 Total

This is an overall 1,405 decline since the March reporting period and averages 467 per month for the quarter.

For the months March April and May the new licenses issued break down as follows.

6,999	Tech/+	89.3% **
627	General	8.0%
217	Extra	2.7%

Total new licenses issues during the period - 7,849

** These numbers come from the very interesting and comprehensive
website of Joe Speroni, AH0A   http://www.ah0a.org

Numbers of US population and the number of hams at the start of each
decade from 1930.

Year	Population	# Hams	Growth Rate
1930	123,202,624	19,000	
1940	132,164,569	56,000	194%
1950	151,325,798	87,000	55%
1960	179,323,175	230,000	164%
1970	203,211,926	263,918	15%
1980	226,545,805	393,353	49%
1990	248,709,873	502,677	28%
2000	281,421,906	682,240	36%
2006		657,814	-3.6 %

The 2006 number was as of June 30, 2006.

I just read the latest QST. In "How's DX?" the author notes that ham radio "used to be" the prime communication from and to Haiti. But now, with cell phones, satellite, etc. it is no longer as important.

This is the real world. Morse is NOT the issue.

Relevance (is that the correct spelling?) is the issue.

Ham radio really WANTS to help in emergencies. This is very commendable. I think, though, we've been sidelined.

We're still there "when all else fails". Morale of those involved remains high, from what I hear / read.

However, in a typical emergency, ham radio is not nearly as primary as it used to be. It's OK. We can still contribute.

Communications have been "universalized"...anyone can use a cell phone. It's natural that communications-specialists see their need waning.

It's OK.

As a hobby, ham radio has a LOT to offer. When I mention to others that I have re-entered ham radio, many people ask "Is that still around?"

Man, of COURSE, it's still around.

If you discuss ham radio with others, do you mention contacting the Space Shuttle? ham radio satellites? weak signal work in VHF/UHF? Sporadic E? Tropospheric Ducting? DX???

How about EME?

You don't have to be doing these things yourself, you just need to let everyone know what the ENTIRE hobby is about.

Morse, data, SSB, FM all have a place.

Ham radio is NOT dying. Hams are. Share our hobby, in ALL its forms, generously with those you know. The rest will take care of itself, for better or worse.

John

>Total all classes  (6/30/06)   - 657,814

Change 5/14/00 to 4/2/03 - *+*13068
Change 4/2/03 to 9/6/04 -  -13072
Change 9/6/04 to 6/30/06  -  -16974

What a perfect example if ignoring evidence that doesn't back up your
argument.  There was no change in Morse from 5/14/00 to 4/2/03, yet we
GAINED over 13,000 hams, so how is a Morse requirement decreasing the
number of hams?

Hi,

I just got a used Butternut HF6V in great shape for a great price. What type of anti-sieze do I need to put between the sections of aluminum tubing ??? Is automotive anti-sieze OK ??? I don't think that it is electrically conductive. Do I need something like electricians use when they connect the aluminum service entrance cable to the breaker box ??? I think that stuff is called Penetrox. Is something like that available at Home Depot ???

I used GB ox-gard on my HF6V. Got it at Home Depot in a tube. Works great &
it isn't expensive. You will find it in the electrical department.

You probably wouldn't get that far anyway. In order to remain within the law, most GMRS/FRS radios can't use external antennas in order to make the 500 mW erp rule. So, if you reduced power to FRS levels and use the built in, not removable antenna on the FRS channels. it is short (really short) range.

Option 2 is to go and get your GMRS license. Then get a handheld that puts out the FULL 5 watts AND has a removeable antenna. Read over the rules as to power output (EIRP) allowed. Set up an external antenna with a max height of I think 20 feet above an existing structure(again check rules on this figure) Take into account antenna gain, cable loss and ACTUAL transmitter output to figure ERP. This is considered to be a Small Base Station according to the rules AND is fully legal to interopreate with FRS radios. The higher external antenna is almost guaranteed to quintuple your coverage area from base to FRS handheld.
2 base stations with directional antennas(again watching erp) would be really reliable.

Hi Al -

Although it may be true I'm not arguing that the current Morse
requirement decreases the number of hams. However, two elements of the
OP's proposal were:

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.
4: Make the no-code license one year non-renewable

My point was that increasing the code requirements beyond those in place
as of 2003 would likely reduce the already declining rate of enrollment
of new hams.

in a time where numbers are declining but that does not maater to al
since the No Code techs are not hams anyway according to AL

Couple other names Ideal Noalox (about $5 at home
depot) and , found at a swap meet - Jet-Lube SS-30
copper high temp (cost unknown, got MOST of container
for $ 2.00!) Also, several antenna companies sell
their own versions, relatively CHEAP! Jim

Hey,

This thread is about CW and ham radio. You scanner assholes stay
out of it. Go find some police or fireman to listen to.

Sc

Nah, if ya can't beat 'em join 'em.... Help us out, we're making a Comm-Post pile!

And my answer is this:

If someone took ham radio, let 'em have it. Fighting to get it back is like fighting over a turd in the sewer.
Just enjoy what you have, and float on down the river, to your Cajun hideaway.....

OK.... taking a poll....

By replying only in CW, either text dit-dah, or periods and hyphens......

How many people actually read that, and what is your analysis of the report?

I am running a script to see how long it takes you to click reply, enter
your response,
then click send. Your effective scaled-score code speed will be calculated
from those particular
```

clicks, along with the character count of the message. You will be made fun
of, according to your
CW speed. Anyone less than 24wpm will be required to take the new FCC
remedial code speed
Enzyte Exam for phallic phlops.

Gentlemen, gud luck.
rb

Huh? You mean there is something besides CW?? Man, don't you know CW saves lives?!?!?

Listen, Weak signals are for CW work on HF while boats are burning. Contacting the space shuttle is just pointless unless you're correcting their keplerian elements for the return flight path or asking if they really drink Tang, Sporadic E [aka EMF bombing] is really pissing off the Condensation Entities that periodically enter the atmosphere to scan for intelligent life, and tropospheric ducting is a lie. I happen to have the control codes to several am-sats and I randomly change the freqs all the time, and you suckers fall for it without fail....
And DX? Hello....? Internet....?
:-)

Yeah, you sure told yourself off but good, too.
I wouldn't take that kinda trash from an inbred skinhead if I were you!
rb

As for canada, there is a problem with tracking. At least a couple of years ago, the cost of tracking a package, when possible, was horrendously high. In the case of the US mail or Fedex, it was impossible. I shipped to canada and the buyer said he didn't get it. He sent a very impolite letter the day I noticed all other items shipped that day arrived. I know he received it and later admitted that it was shipped to the wrong address, which I know better.

Not being able to track makes for a risk that I was unwilling to handle at the time, so I cut out shipping to canada.

As for hawaii and alaska, tracking and shipping costs were terrible to those places as well. Some items can't be shipped by air and would be shipped by ship requiring a time delay in which, again, thieves take advantage of and get their refund.

The combination of eBay and Paypal creates a haven for thieves in those areas and others. They favor the buyer and it will ultimately cost the seller more in the long run.

APO and FPO can't be tracked either. Tracking is a requirement for the eBay/paypal so-called protection.

I was once a gi. Gi's move. Sometimes it takes a long while for the gi to receive mail that has to follow him/her.

I realize that the problems are caused by the 'few', but they create a risk or null out certain protective clauses in contracts. SOme businesses can afford to go through the extra effort, wait the extra time or live with the occasional loss. A business that loses one sale in a hundred can afford the loss better than an individual who stands to lose one in the only one or two sales they make.

Ebay/paypal is too protective for the buyers and not the sellers. The law is too difficult to motivate for most of the little sales that originate from ebay. Thieves know this and take advantage of this at every opportunity they can.

But the costs are extra to those businesses.  shipping to those
states/territories are higher than cross-continent shipping.

Only a month? Not bad, really. USPS is notoriously slow with insurance
claims (but then, aren't they all?)

The tracking is not a problem, FEDEX tracking works across the borders
and the USPS and Canada Post tracking systems interface with each other
using the tracking number issued at the point of mailing.

    <pre wrap="">I frequently see postings in the ham radio related newsgroups for
items
currently being offered on E-Bay.

All to often I that items will be shipped only to the lower 48 states,
leaving hams in Hawaii, Alaska, and Canada out of the picture.  What is
the problem.  In Canada we are well served by FEDEX and the United
States Postal Service.  Amateur radio equipment crosses the border with
out any problem.  I realize that Hawaii and Alaska may be a bit far from
the  "lower 48" but the same delivery services are available even though
surface transportation may be a little bit slow.  In the US you also
have UPS, the folks in Brown which we Canadians prefer not to use
because the often make the border crossing more difficult than it needs
to be and we don't like getting stuck with brokerage fees.

So why the discrimination, if the buyer knows that delivery may take a
little longer and is prepared to accept the fact then it becomes a non
problem.  If the seller is intimidated by the prospect of complicated
paperwork, he needn't be.  Please leave it up to the buyer to decide
whether he wants to bib or not.

I can not speak for shipments to Europe, Africa, India, China, or the
South Pacific but for fellow Americans, or friendly northern neighbours,
I think that people should be prepared to deal with us.

Thanx for letting get this off my chest and I realize that I have cross
posted this to four different newsgroups but I wanted to get to a broad
audience.
```

```
Paul
    </pre>
  </blockquote>
  <pre wrap=""><!---->\

As for canada, there is a problem with tracking.  At least a couple of
years ago, the cost of tracking a package, when possible, was
horrendously high.  In the case of the US mail or Fedex, it was
impossible.  I shipped to canada and the buyer said he didn't get it.
He sent a very impolite letter the day I noticed all other items
shipped that day arrived.  I know he received it and later admitted
that it was shipped to the wrong address, which I know better.

Not being able to track makes for a risk that I was unwilling to
handle at the time, so I cut out shipping to canada.

As for hawaii and alaska, tracking and shipping costs were terrible to
those places as well.  Some items can't be shipped by air and would be
shipped by ship requiring a time delay in which, again, thieves take
advantage of and get their refund.

The combination of eBay and Paypal creates a haven for thieves in
those areas and others.  They favor the buyer and it will ultimately
cost the seller more in the long run.

APO and FPO can't be tracked either.  Tracking is a requirement for
the eBay/paypal so-called protection.

I was once a gi.  Gi's move.  Sometimes it takes a long while for the
gi to receive mail that has to follow him/her.

I realize that the problems are caused by the 'few', but they create a
risk or null out certain protective clauses in contracts.  SOme
businesses can afford to go through the extra effort, wait the extra
time or live with the occasional loss.  A business that loses one sale
in a hundred can afford the loss better than an individual who stands
to lose one in the only one or two sales they make.

Ebay/paypal is too protective for the buyers and not the sellers.  The
law is too difficult to motivate for most of the little sales that
originate from ebay.  Thieves know this and take advantage of this at
every opportunity they can.

Thanks. This is excellent news as Kenwood make quality radio products.

Well I guess ab needs to be a smartass, and doesn't take time to read the
post before he leaves his stupid comments.
Yes cosmetically its fine, I didn't remove it from service, so I describing
what I have, if that's not good enough for ab, than maybe he should get a
life!!

hi de Max iz1aux
I am looking for 43,500 and 44,000 Mhz crystals to replace on my FT7B.
Please any suggest, or anyone have this crystals?
thank in advance

I have just put on Ebay for sale an Icom IC-R7000 receiver with manual, Icom
disccone antenna and low-loss coaxial cable. The IC-R7000 is a VHF-UHF
general coverage receiver from 25MHz to 2GHz. This version is the one sold
in Canada, without coverage gaps.

Things may have changed, but when I tried to get tracking and/or proof
of delivery, I couldn't get it and got ripped off.

yea, don't believe FedEx when they say they deliver to Alaska....They
only deliver to Anchortown, Fairbanks, and Juneau..... for all the bush
villages and towns, FedEx gets turned over to the USPS in Anchorage
for delivery, and there is NO Tracking after that...... FedEx SUCKS

for Alaska delivery..... Lost a Laptop to there system, no refund,
or claim was ever paid. got a letter from the Manager saying,
"So Sorry for your loss, I feel your pain." I'd like to give him
a bit of my pain, right in the ***........

CT9 software includes a .RIG file for the IC756, but not the pro 3.

Does anyone have - or know where to find - the .RIG file that makes the
Log-EQF v9 software compatible with the IC-756pro3 CIV protocol?

Appreciate a lead very much.

73, WZ8A

I have a few used portable shortwave radios that I would like to sell.
They work fine; I'm just selling them because I have other radios that
I use now.

The radios I have available are:
* Eton E100
* Redsun RF-1210
* Sangean ATS-909
* Tecsun PL-350

If you are interested, please go to
http://cobaltpet.blogspot.com/2006/07/used-radios-available.html and
post a comment.

I have several items for sale from an estate that I am helping close out.
Items include:
1. AEA Model PK-88 Packet Controller/TNC, no manual or power supply, $20;
2. Si-Tex Model 950 Scan Marine Transceiver with mic and power cord. Works
and
puts out around 40 watts into my dummy load, Price is $40;
3. Kenwood MC35S Mobile Mic, very nice shape, works great, $35;
4. Yaesu FT-64 440Mhz Mobile Transceiver, no tone board, but outboard tone
boards are
still available. Works, with mobile mic and power cord, see e-Ham reviews.
Price $45.
All prices do not include shipping. Shipping costs will be actual from
79602. No handling fees.
Thanks, Charlie Hugg, K5MBX

I have just put up for auction on Ebay a Boonton Model 190 Q meter. These
instruments are useful for measuring the inductance, Q and capacitance of RF
components over the frequency range 20 to 260MHz.

This kind of instrument is still in use in some labs for Q measurements.

Starting auction price the princely sum of $1.

FS Yaesu FT-720RU 440Mhz mobile transceiver. This rig has a detachable head.
It covers 440 to 450Mhz and runs 10 watts. It works fine on receive, but I
can't get anything out of it on transmit. It comes with a Yaesu mobile mic
and the power cord, but no manual. Cosmetically, it is in great shape. Price
```

is $35 plus shipping. Thanks, Charlie Hugg,
K5MBX

Paul,

The reason is very straightforward. This is a boatanchor newsgroup and it's mostly geezers who deal in old radios.

Geezers live in the past; WE don't think critically; the same tired thoughts cycle through our heads. Even worse, many of us hallucinate and make up reasons.   You'll see several in this thread.

Many geezers (to be fair, not all) are Xeno-phobic.

To them, Hawai'i is FAR away and never having been there, geezers imagine that it's a foreign country with different laws a strange language. In their minds, it's a not that far from Hawai'i to, say, Nigeria or Pakistan. Even if they could call the Honolulu police to report a deal gone bad, they would not be able to speak to them with finding a translater.

On the other hand, a geezer thinks, OK, I'm in Virginia, if a $30 deal in Kansas goes bad, I'll just get in the Biscayne and drive over there tomorrow, demand my money.   I have that recourse.

People! As Paul says, Hawaii and Alaska are U.S. States. They have senators in Washington. They vote for the president. As far as the U.S.P.S, FedEx, and UPS are concerned, those states are, like, right over there.

To Sprint and other fone companies, after 7 or 8 PM, just pick up your fone and those places are a free call. If you pay for wired service, it's 5 or 7 cents a minute.

Here are some actual numbers from www.fedex.com

2 day service - 20 pounds

Virginia to Kansas - $61.85
Virginia to California -$65.83
Virginia to Hawai'i - $66.87

2 day service - 60 pounds

Virginia to Kansas - $151.93
Virginia to California -$166.63
Virginia to Hawai'i - $169.24

About the same price for 2nd day service.

FedEx Ground service - 20 pounds

Virginia to Kansas - $12.70   - 4 days
Virginia to California -$16.03 - 4 days
Virginia to Hawai'i - $48.22   - 7 days

FedEx Ground service - 60 pounds

Virginia to Kansas - $28.40 - 4 days
Virginia to California -$39.08 - 4 days
Virginia to Hawai'i - $114.63 - 7 days

Three days longer and more dollars going ground to Hawai'i.   But then Buyer Pays Shipping!

The same tracking and return receipt, the same laws govern the business deal. It takes about the same amount of time.

The reason that they say "lower 48" is that they think it's still 1936. It just comes out. There's no reason other than old thoughts cycling in old heads like regeneration in a triode.

It's like hollarin' out,

Kids these days!

You call that music!

Dag-nabbit!

I've bought items from Canada and sold to Canada. One thing I don't like about it is that it's expensive to ship across the border. In fact, it's cheaper to ship though Canada to Alaska.

But then, buyer pays.

I just had the experience of buying from China, a DEGEN DE1103. If you don't have one, go over to the Bay and look up the seller LIYPN. $44 for the radio and $24 shipping and insurance. Took about 8 days to get here.

This is the best pocket shortware radio. Check out the reviews on the web. 1 kHz readout, better than 1 uV sensitivity, stable, 4 and 6 kHz filters. Covers 100 kHz to 30 mHz continuous so you can listen to AM broadcast, 160 meters, everything!

I can sit in my car, pull out the whip antenna and copy 7040 CW in the evening. I heard W1AW CW the other day, this is in Virginia.

SSB sounds good. Well, mostly good. I still can't understand the hollarin' on 27,000.

While you're buying and enjoying the DEGEN, think about global commerce and the fact that you just traded with a real foreign country.

FS TenTec Scout Model 555(SN 11A10098)as new in the box. This Scout and accessories has been used about 8 times. It comes with the fellowing accessories:

1. TenTec Hand mic;
2. Noise Blanker Model 297 installed;
3. Original Manual;
4. Power Cable;
5. Original Shipping boxes;
6. 7 Band Modules Including:
   10 meters
   15 meters
   17 meters
   20 meters
   30 meters
   40 meters
   80 meters

There is not a scratch on the gear and it works perfectly. Price is $425 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Unless something goes wrong. The abuse of international
transactions is legendary. Even eBay, PayPal, et.al. seem

to acknowledge it. As another poster observed, if you are
a large-volume commercial vendor, you can "eat" the
occasional transaction gone wrong. But if you are selling
one-off things (boat-anchors or not) on eBay, etc. it has a
significant chilling effect, no matter what generation you
represent.

I have two Eimac 3-500Z tubes for sale.They belonged to a friend who replaced them with two RF Parts 3-500Z. They are guaranteed to have 80 to 90 percent output. They do have some time on them, but are still good. They are missing the heat sinks on the tops. If you have a pair of bad tubes, you can remove the heat sinks on them to use on these tubes. They will be shipped in the foam cushioned boxes used for the RF Parts tubes. Price is $100 for the pair. Or $60 each plus shipping. Thanks, Charlie Hugg, K5MBX

I ship to anyone that wants to pay for it. I do avoid APO/FPO shipping, and not because of scams but because of very very poor delivery chances on anything not a 1 ounce letter.

I sent several boxes of supplies to friends serving in Iraq with the US Marine Corps...most of the boxes languished in a warehouse in Germany for about 4 weeks before being hauled to Iraq...then it was another 2 or 3 weeks befire they actually got the stuff. Needless to say, never ship a puppy or kitten to a war zone. I have one realative that was in Iraq for a year (the last time). I mailed him a Christmas package at the end of October. He got home in February and still hadn't received it.

I ship DX but the buyer has to pay for the shipping.

Yes, shipping to OIF/OEF is very very slow. This is because nobody wants to
go in there. Regular fuel shipments can take 2 weeks to cross the country.
Shipping to APO/AE (Europe), APO/AA (Americas) and APO/AP (Pacific region)
is fairly steady, at least going by Priority. Parcel Post or Media Mail go
by SAM (Space Available Mail) and can take months to get ANYWHERE within the
military postal system. This is because EVERY other class of mail gets
priority over SAM, and some of those parcels don't leave the mil hub for
weeks (stateside).

What I've done sending goodies to our troops is to use the flat rate
Priority Boxes available free at the post office.   All you can stuff
into it for the 2 pounds rate or $8.10. Mose have been delivered within
a couple weeks.

If interested might check out http://www.anysolder.com

Hi
I have a Collins 75S-3C Round Emblem, and it has worn paint on the
left side of the Gain plate. Its right next to the bandswitch. Not
the grain on front panel, the worn paint is on the plate. Looks like
the person before me, turning the knob back and fourth had his thumb
always rubbing against the plate and that worned it out. The letters
on the top plate are fine and the right side is fine.
So, does this plate come off and I can get another?
Which would make it alot easier.
Or I have matching paint and I can respray the gray on that side. Not
sure how it will match? And the 5 white indicator
lines, how would I get those back on. They are not fully gone. The
beginning closest lines to the knobs are there,
but when they extend to where the outer end where his thumb rubbed are
gone.
Sorry for the long discription, Rich

In article <Y0QDg.7667$xp2.737@newsread1.news.pas.earthlink.net>,
rmowery28146@earthlink.net says...
>
>
>>
>> Ten Tec is coming out with a new HF/6 mtrs rig, so the market isn't
>> completely dead. It'll be called the Omni VII.
>>
>> bob
>> k5qwg
>
>The big differance is that Kenwood produces other electronic items, but Ten
>Tec's only produce ham related items as far as I know.  TT has to keep doing
>somethig to sell the rigs or go out of business all together.

Amateur radio equipment is a small part of Ten-Tec's
business.  Their radio equipment line also includes
commercial and military applications.  In addition.
they sell a lot of enclosures, as well as tool and
die equipment.

73,
Bob

Thanks Ed. I should have been clearer - what new product is expected from
Kenwood?

Deryck G0KOR

Hello. I have for sale a military HF shortwave SSB transceiver, military designation AN/GRC-215

The radio covers 2 MHz to 30 MHz in 10 Hz steps, using a high-speed DDS synthesizer.
It is capable of USB, LSB and CW as well as data.
It comes with EVERY interconnect cable and runs directly from 110V AC or 220V AC. RF output power is 500 watts+, produced by four leisurely-running parallel RF amplifiers using two MRF150 MOSFETS each, with phenomenal linearity and carrier-to-noise performance.

The GRC-215 was developed for deployment in the Western-European Regency Net (in wartime called the FAN or Flaming Arrow Net). This net was targeted to be a tactical "nuclear hardened network", based on shelterized mobile units to maintain shortwave communications on the battlefield when all else has failed (read: After a nuclear conflict). See also
http://www.fas.org/man/dod-101/sys/land/regency-net.htm
Needless to say the radio therefore is built like a battleship, it probably has cost the taxpayer hundreds of thousands of dollars, and it shows.

The regency network was supposed to be deployed in Europe at the end of the eighties but when the wall came down and the Cold War ended, deployment never happened, and the equipment was surplused.
As such, my GRC-215 is NOS, unused.
If you are into collecting military radios, look no further. You will not find a better military HF radio. Only the best components have been used throughout. To give you an example, EVERY RF path in the transceiver is switched using high-speed Kilovac vacuum relays, in both the receiver and the transmitter. There must be like 30 of these relays used throughout the radio, NO switching diodes are used anywhere in the RF paths. The use of these vacuum relays allows fast frequency hopping under full power conditions, but also normal single-frequency operation is possible

It has a microprocessor controlled RF pre-post selector that gives a very narrow RF passband for any frequency selected in the operating frequency range, with phenomenal out-of-band rejection BEFORE the mixers. This pre-post selector allows multiple GRC-215 radios to operate in near-vicinity at maximum power and as close as 10% of the set frequency, without mutual interference. As such, not even the Icom IC-7800 comes close to the large-signal handling performance that the GRC-215 offers.

The receiver uses two cascaded Collins mechanical filters for the ultimate selectivity. The transmitter has its own mechanical filters.
I can go on and on about the quality of this radio, but I will limit myself here to a list of the included components:

- C-11670/G control head using direct-entry keypad and green plasma display

- RT1512/G receiver-exciter (can be 19" rack-mounted)
- TN612/G Pre-Post selector (19")
- AM7296/G quad MOSFET RF power amplifier under CPU control and full VSWR protection (19")
- PP8097/G Power Supply capable of 115V and 240V (switchable) (19")
- All interconnect cables and AC power cables
- First Echelon TM handbook for the RT1512/G receiver-exciter

email me at scr300@comcast.net if you are interested in this ultimate military HF transceiver!
Only serious inquiries please

I think that Kenwood is going away of the amateur-market.
The production of the TS950 and the 790 is ended a long time ago and is replaced with the TS2000 ... says enough for me i think.....

Other than the D-Star radio? I don't know. Since all three major Japanese vendors have recent models already on the market, I'd wouldn't be surprised to not see something else about to marketed just yet.

Ed

Thanks for the info Bob.  I had not looked to see what TT has produced in a
while.  From what I saw I still doubt that TT could make much  of a go if
they quit the ham business.

I frequently see postings in the ham radio related newsgroups for items currently being offered on E-Bay.

All to often I that items will be shipped only to the lower 48 states, leaving hams in Hawaii, Alaska, and Canada out of the picture. What is the problem. In Canada we are well served by FEDEX and the United States Postal Service. Amateur radio equipment crosses the border with out any problem. I realize that Hawaii and Alaska may be a bit far from the "lower 48" but the same delivery services are available even though surface transportation may be a little bit slow. In the US you also have UPS, the folks in Brown which we Canadians prefer not to use because the often make the border crossing more difficult than it needs to be and we don't like getting stuck with brokerage fees.

So why the discrimination, if the buyer knows that delivery may take a little longer and is prepared to accept the fact then it becomes a non problem. If the seller is intimidated by the prospect of complicated paperwork, he needn't be. Please leave it up to the buyer to decide whether he wants to bib or not.

I can not speak for shipments to Europe, Africa, India, China, or the South Pacific but for fellow Americans, or friendly northern neighbours, I think that people should be prepared to deal with us.

Thanx for letting get this off my chest and I realize that I have cross posted this to four different newsgroups but I wanted to get to a broad audience.

Paul

Don't feel too bad, Paul. You'll often notice in the same listings that (even if they ship solely by USPS) they will not ship to US military APO/FPO addresses, either. We get left out in the cold even more often than any of the above named locations. So much for supporting the troops as it were.--

USPS Air to South Africa takes 4 days from California. Customs is handled by them and it is extremely easy to use. Great service.

Americocentric sellers maybe?

Hmmm???

Hawaii is too hot?

Canada is too big?

Alaska is just right!!

But this doesn't respond to the hypothesis.

That's because shipping to an an APO/FPO is no longer a service provided
by the U.S. government. At one time mail to an APO/FPO was delivered to
a U.S. millitary post office that then shipped it using U.S. milltary
transport, There was a good chance that the mail would actually arrive
and it would be undamaged. Now APO/FPO mail is sent via the regular
postal system, but the U.S. government picks up the tab.
```

Now, the chance of the mail arriving is much less as it stands out.

As for Paul's comments, they really don't hold any water. Small sellers don't ship outside the continental U.S. because they don't want the risk.

If an item is lost, stolen, damaged, or takes a month or two to get delivered, they can't afford to replace it, or "eat" the loss. Paul even has more problems because Canadian customs may hold an item to determine its value, or if it can be legally imported as long as they wish. They can also assess the value for sales and other taxes.

Obviously he never has had any experience clearing an item through customs. If he had he would have praised the low fees, speedy processing and general reliablity of the courier services.

Considering the general quality of things sold on eBay, the sellers are actually doing you a favor. While many of the sellers will attempt to keep you satisfied, if you have to wait a month for something to arrive and in Paul's case pay GST (general sales tax), import duty and customs clearing fees, then have to send it back, he would loose a lot.

Besides paying for shipping both ways, he would have to pay customs clearing fees at the U.S. border and prove that the item he is sending back was actually being returned to the U.S. as a defective purchase and not scamming the customs people by claiming it was.

This means that some items both of you either have to keep or pay for and never get no matter what it costs. Where do you draw the line? $100, $200, $500? If it costs $100 to ship a radio to you and $100 to send it back, it does not make much sense.

Geoff.

Been here six years, and have NEVER had anything shipped to me USPS that
hasn't gotten here, and if it was properly packed, it has always gotten here
in one piece. I pay for Priority Mail shipping, which now is only a dollar
or two more than Parcel, and I get it here in a week to 10 days.

And actually, the USPS takes our mail as far as San Francisco via regular

channels, and from there it's shipped commercial air (just like any other
air mail) to our local APO hub, and then to the mail rooms.

I have been sending to an APO for several years as my son's family is
in Europe. I agree that the USPS service has been very good. They
once lost a Jeep wheel for 3 months, but eventually it too made it to
the destination.

I see all kinds of companies that won't ship to an APO. I think they
just don't want to deal with the customs forms. It can be a PITA. In
spite of using USPS for years to ship to the same APO, about half the
time I end up with the wrong form, and have to fill out another one
after I get to the P.O. I even wrote to USPS to ask how I can tell
for sure which form to use. Their very lengthy and convoluted answer

didn't help a bit. It still ends up as a case-by-case basis on
whether to use the short form or the long form. I can fully
understand why people and companies don't want to ship to an APO.

Dick

The only possible problem is loss or damage. USPS air delivers in a few days and for a reasonable border fee, most of which is sales tax at this end. If the customs declaration is made out properly, stating that the contents are amateur radio equipment and if the eBay auction price is stated as the value, there is rarely any problem unless the merchandise is misrepresented in the first place. There is no duty on amateur equipment entering Canada from ANYWHERE, just sales taxes.

* High Performance! NOT High Cost
o  A replacement solution for conventional
   power meter and sensor.
o Simple USB connectivity to laptop or PC.
o Multiple sensors on same PC
o  Light weight and easy to use.
o  Good for all manufacturing and I&M needs
o  Robust construction with high reliability
o No reference calibrator required.
o Measurement range from -50dBm to +20dBm up to 18.5GHz.
o Future products to 40GHz.
o Currently comes in two frequency ranges
http://www.satori-technology.com

We will be on stand 426 at the European Microwave Exhibition in
Manchester, UK,  from
the 12th to the 14th of September. Come a long for a chat and see a
demonstration  of  our
ST series Power Meter.
We look forward to meeting you there.

The issue is cost, I believe.

For some reason sellers dont want to pay the cost to the last two states, EVEN IF THE BUYER IS FRONTING THE FEES> DOnt know why.

I have shipped to Hawaii several times with no issues at all other than time.

I have had no problems with Canada, other than time. Sometimes it takes an inordinate amount of time . But you can accept that if BOTH parties are good communicators.
>
Keep in touch with your seller or buyer, dont just fail to respond. It makes them nervous, folks.

Ran into a certain well known cheap-assed ham radio bastard operator today. Everyone in the local clubs know him. He stinks, has greasy hair, bathes monthly (?) and is known to crash ham widow's estate sales the day after they plant the SK.   In short the guy is a true F-N low life pig. (...you prolly already know just whom I am speaking of eh...? grin) Drives a beat up old car with 10 antennas on it.

Today I caught this bastard ham stinkball rooting thru the battery recycle boxes at the local office supply store. He dug out two Dell laptop batteries and quickly shoved them into his dirty overalls pockets he was wearing. (The store is staffed by college age kids who don't give a s--t anyway so they let him clean out the recycle bins of batteries, toner cartridges, old cellphones and other similar stuff as it's less work for them.....good point I guess.)

Apparently this guy has already hit every recycle bin where ever he could get away with it, and is hoping to claim all these dead Dell batteries as his own on their recent Laptop Battery Recall Program that's been in the news of late. Then when he gets the replacement units he plans to re-sell them at a profit online. Talk about a cheap opportunistic scrounging bum! Only a smelly ex-hamfest bum who used to sell crap at hamfests and now scams people on e-Bay could think of something like this....

This pertains to the RUMOR that has been circulating for the last 7
years about Kenwood getting out of the amateur radio business.

Kenwood is fully committed to amateur radio and we have no plans at this time of closing our amateur division. Kenwood continues to design and manufacture amateur radio for our customers. Though the market has some what slowed down a little, we continue to put 100% of our time, effort and engineering skills in our amateur division and we look forward to the continued support of these products.

Some how there's been a rumor circulating in the amateur world of Kenwood getting out of the business. For your information, this is NOT true at all, please pass it along to anyone who has made mention of such rumor or comment.

We have just updated our Elecraft Picture Gallery with a super group of new customer pictures.

The pictures include custom machined paddles for the KX1 by WB9LPU, homebrew SO2R control boxes, SOTA mountain toping, FYBO KX1 Pics and K2 based DXpeditions to VK9X, VK9C, St. Martin, Key West, 8R1 and a host of other locations. Also check out our two featured pictures, including one of the newly discovered 'Cafe K2' in Sweeden. :-)

They reached via the 'Picture Gallery' link on the upper right side of the main page at http://www.elecraft.com

Special thanks to picture submitters: DL2KCD, DF4KV, DL3KMS, DL3ALX, DL7KCM, DL8BAG, SM7KJH, WB9LPU, DL1JET, K1EV, 6Y5/KN5G, 8R1ZUM (K7ZUM), DG2KAL, OE3ZK, DG8KAD (and bird), KD0RC, DL7JF, F5VJC (GM3SKN), KF6C, K1JD, KI4DGH, KT5X , K7TQ, KA3IXF, HB9AFI, N6IZ, N8XE, NY9H, PA3VBT, T32QS (N6TQS), W1TF, W6IZT, WA5KPA, WA7CS, SM5CBC, WH7N, W0YG (VK9CG, VK9XG) and DL2DE.

Great stuff guys! Thanks again for sending these pictures in to us.

73, Eric   WA6HHQ

I don't know about any Dell recall, but I routinely go through the recycled battery boxes when I see them. I often get NimH batteries which after being reconditioned (discharged/recharged) a few times are perfectly good.

Geoff.

Don't know about this specific guy, but I do agree many hams need to take a
bath, or at least use some deodorant, before they attend hamfests...

I recently recieved three packages, one from the US via FEDEX GROUND,
another from the US via USPS, and another from Canada via Canada Post.
They all arrived in less than a week, and I paid no customs.  There are
no customs duties for ham radio equipment.

Paul

addresses, either. We get left out in the cold even more often than any of
the above named locations. So much for supporting the troops as it were.--
    </pre>
  </blockquote>
  <pre wrap=""><!---->
That's because shipping to an an APO/FPO is no longer a service provided
by the U.S. government. At one time mail to an APO/FPO was delivered to
a U.S. millitary post office that then shipped it using U.S. milltary
transport, There was a good chance that the mail would actually arrive
and it would be undamaged. Now APO/FPO mail is sent via the regular
postal system, but the U.S. government picks up the tab.

Now, the chance of the mail arriving is much less as it stands out.

As for Paul's comments, they really don't hold any water. Small sellers
don't ship outside the continental U.S. because they don't want the risk.

If an item is lost, stolen, damaged, or takes a month or two to get delivered,
they can't afford to replace it, or "eat" the loss. Paul even has more problems
because Canadian customs may hold an item to determine its value, or if it
can be legally imported as long as they wish. They can also assess the
value for sales and other taxes.

Obviously he never has had any experience clearing an item through customs.
If he had he would have praised the low fees, speedy processing and general
reliablity of the courier services.

Considering the general quality of things sold on eBay, the sellers are
actually doing you a favor. While many of the sellers will attempt to
keep you satisfied, if you have to wait a month for something to arrive
and in Paul's case pay GST (general sales tax), import duty and customs
clearing fees, then have to send it back, he would loose a lot.

Besides paying for shipping both ways, he would have to pay customs clearing
fees at the U.S. border and prove that the item he is sending back was
actually being returned to the U.S. as a defective purchase and not scamming
the customs people by claiming it was.

This means that some items both of you either have to keep or pay for
and never get no matter what it costs. Where do you draw the line?
$100, $200, $500? If it costs $100 to ship a radio to you  and $100 to
send it back, it does not make much sense.

Geoff.

Of course the original post was "I heard there was a rumor" which means
just about anything (or nothing at all).

But, given that people are buying into it, it makes sense to counter
with more authority.

It's not clear whether you are posting as Kenwood (in which case
```

it would make a lot of sense to indicate that), or relaying something you got by email or on their website (in which case you really ought to indicate where it came from).

Michael VE2BVW

Eric,

Very nice stuff! I was wondering when you were gonna update that part of your website!

Elecraft is what got me back into ham radio.

John

Thought I would give it another try. Left message with people that were passed on to me with no luck.

I am looking for a service/schematic or owner manual for Wyman Tridon 2000 ATV Transceiver.

It is a Wyman Research Inc. Tridon 2000.

Any help please

Several years ago I had a pack and ship business. one of my customers had a VCR he wanted mailed to his son some where in Alaska. The post office used a contract air carrier to deliver the mail to the island where the son lived. As the package with the VCR was being off loaded from the seaplane it was dropped overboard. It took over a month to receive payment from the USPS (he did insure the package).

I need to reprogram a Yaesu FTH-7009 handheld.
Downloaded vertex.zip
Found several schematics for radio interfaces, but
they disagree on whether to invert the return data or not.
Tried both.
Microphone socket seems to be three-pin, with mic on tip, ground on
ring, ?? on shield. Tried several variations of hookup.
No joy. SW just sez "problem with connection".
Scope shows nothing on the line...yes, used digital storage, I didn't
miss it.

Of course, the websites are Russian. Pasting into a translator
didn't help.

Can someone supply the schematic for a working interface with
exact details on wiring of the radio plug and what, if anything,
has to be done on the computer side to make the rs232 port open?
thanks, mike

Have a quantity of Radio Communications Service Manuals, both Commercial &
Amateur that I have rescued from the Dumpster. Most ot them are in Like New
Condition.

Please check my site: www.rodemi.com for what is available. I am updating
the site as time allows.
I recently retired from the Commercial 2-way radio business and have a
"goal" to clean up the Garage & Basement.

Thanks for looking....Norm VE3CZI

An interesting question.

I'm sure it's OK to modify commercial radios to transmit in the ham
bands. I do not think the reverse is true.

A good example is a ham modifying a 10 meter amplifier to use on
CB...this is certainly NOT legal.

An email to ARRL should verify this.  I recently got a very concise
answer to a question regarding antenna height and airports.

However, some friends have told me it is legal to modify a ham radio to transmit on non-ham frequencies as long as you are authorized to use them and you transmit on those specific frequencies and on the allowed power.

<snippety>

Actually, that latter part is NOT accurate. I speak as one who has been in the land/mobile radio service field for 10 years, and an active hamateur for 27.

In order to be 'legal' to transmit on commercial frequencies (those governed by FCC Part 90 regs), the rig involved must be 'type accepted' by the FCC. This means that its overall design is reviewed by the commission's engineers, and is certified to operate correctly under Part 90.

Among the other requirements of this part, it specifies that the radio involved cannot be easily reprogrammable by the user. This means that frequency programming via front panel keypad, for example, is a big no-no.

The one exemption I know of is that of modification to transmit on MARS or CAP frequencies. Since the requirements for the former are dictated by the military, and the latter by the CAP themselves, the FCC does not get directly involved.

So, in summary: Operation of a non-type accepted (read: amateur) transceiver on commercial frequencies is indeed illegal. However, operation of a commercial radio on amateur frequencies is perfectly legal, as long as one holds an appropriate amateur license.

Operation of an amateur radio on MARS or CAP frequencies is probably OK as long as you're authorized for such (as in being a MARS or CAP member), and your radio meets the technical standards of MARS or CAP. Someone from one of those organizations would be a better one to ask.

> If so, can someone point me to a website, whether on the FCC's site or ARRL's site or someplace else that shows this? Again, I assumed it was not legal to use a modified ham radio on such non-ham frequencies, but I've heard from others that it is. Just wanted to clear the air.

Of course. The section that you want is 90.203. Here's a link.

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=90&SECTION=203&YEAR=1998&TYPE=TEXT

Or, if that one screws up due to its length...

http://makeashorterlink.com/?P1425178D

Happy researching.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

We've moved SolderSmoke to a new web site host (please
let us know what you think of the new host):

http://www.soldersmoke.com

Topics discussed in SolderSmoke #29:

-- A PC board box for Bill's FET final
-- Richard Feynman video clip
-- Mike's amazing Octopus oscilloscope aid
-- Another plea for graphics help (SS logo)
-- Overcoming podcast tech difficulties
-- FIRST EVER SolderSmoke EM wave poetry:
   from The Moody Blues
-- SolderSmoke Mailbag: Tony Fishpool and the GQRP club

Listen and download at: http://www.soldersmoke.com

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. In order to subscribe to SolderSmoke, point your podcast software to:

http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

That's the new the homepage for our show. All our programs are available there.

We hope you enjoy the program. Please send us feedback.

73 from London
Bill M0HBR N2CQR CU2JL

Mike,
I have a working interface and the vertex s/w works just fine.
Mic socket - I use a miniature 2 way, data on tip, ground on sleeve.
On computer I just use COM1, no set up required.
Mail me off list if you need any more info.
Regards,
Eddie

It's likely legal to modify the radio. It's pushing the transmit
button that would be illegal.

I'm not getting any younger and it's time to clean out the stuff that's not going to get used anytime soon.

This is a National multi-band tank circuit that tunes 80-10 meters with one turn of the shaft, without a bandswitch. Ideal for tuning the input of that big linear, incorporating into a low-power antenna tuner or whatever.

I believe these were originally rated for 10 watts, but I think it should handle more than that from the looks of it.

Photo at: http://www.k6mhe.com/n7ws/MB-40-L.jpg

Asking $50 and I'll pay the shipping in CONUS.

Email n7ws@yahoo.com

73,

Wes

Well, I guess my age is showing...... your right of course it is CFR47
and when I left the Commission it was Type Acceptance and Type
Approved...

Bruce in alaska     semantics gets you every time.......

I have two new, unused, National R175A plate chokes (radio frequency chokes) for sale.

These are ideal for high-power tube type amplifiers. They are wound in sections on ceramic forms to avoid resonances in the amateur bands.

Photo at: http://www.k6mhe.com/n7ws/R175A.jpg

Asking $25 each, or $40 the pair, shipped CONUS.

email n7ws@yahoo.com

73,

Wes

For sale one B&W (Barker and Willimson) 10-80 meter plate
inductor/bandswitch assembly.

This is the big one for that BIG amp you want to build. This item is
used but as new. Shiny silver, perfect ceramic and no arcing on the
contacts.

Photo at: http://www.k6mhe.com/n7ws/850A.jpg

Asking $200 shipped to CONUS.

email:n7ws@yahoo.com

73,

Wes

I have 5 brand new SOMMERKAMP TS-2000DX 10 meter mobiles rigs and comes with the box, manual etc. . This is identical to the Ranger RCI-2950. It covers AM/FM/SSB and CW and will produce 25 watts on SSB. I will take $150 each plus shipping. I can be reached at (508) 821-2993 or email. WZ1U Steve / Lakeville, Ma.

I got the FTH-7009 programmed, but it doesn't work in
the 70cm ham band. Will transmit down to 449 or so, but
not receive. Can I fix this with a tweek to the VCO?
Or am I just out of PLL divisor ratios.
Suggestions? Documentation?
Thanks, mike

hello everyone,

i'm trying to build a transistor theremin by following an article written by dr. bob moog in 1961. the only problem really is the RF coils and transformers; he gives specific instructions on how to make them by winding them yourself.

you can see the schematic here:
http://moogarchives.com/there61b.htm
http://moogarchives.com/there61c.htm

first he says to wind the coils on 1/2 inch diameter slug-tuned coil forms. can anyone tell me where i can find these or if there's something i can use instead.

next he mentions that some of the windings need to be "scramble wound". could anyone please explain to me what that means or show me a picture of what that looks like.
also if anyone has some general information or tips on winding rf coils and transformers, i'd greatly appreciate it.

thank you so much,

patrick

"scramble wound" means just what it sounds like.
uneven placement of the turns across the coil space
as contrasted with careful placement of the wire in
nice neat layers.

> also if anyone has some general information or tips on winding rf
> coils
> and transformers, i'd greatly appreciate it.

There are many resources available online.
Google is your friend.

Try going to QRZ.COMM or QRZ.mods.   If your able to you will find
if that rig is covered under their "mods" listings

I have a LK 500NTC (no tune) amp that ran well for several years. Now one
of the 3-500Z's (both Eimac)
filament pins came unsoldered.

K4DLI helped me resolder the pin with a torch and silver solder. Just for a
test I swaped the tubes and within a week the other tube had unsoldered.

I had this problem in a Henry 2K with the tube not fully sitting in the
socket but the 3-500Z's are firmly in the socket. I have a new tube socket
to install but is this the only problem? I really see nothing wrong with
the old socket. Filament voltage is 5V as it should be
on all pins.

Ideas?

Thanks in advance.

73 Dave K4JRB

Seems like you already know if the contact in the socket is "leaking" the filament pin will get hot. It's not hard to check.

Hi David from Ken in the UK,

This is a common fault with these valves (tubes).
It's due to heat built-up over time.
The only solution that I know of is to blow cold air up around the valve pins.
One final point, to extend the life of the '500Z' is to lower the heater voltage to around 4.75v. This will save the valve from premature filament failure.

Hope this helps,   cheers, Ken, G4KIR.

Hallo

I got a problem with my drake TR-4CW.
Hopefully someone can help.

It is not very much used.
But suddenly it was not possible by help of the RF tune control to get maximum noise or signal when it pointed on " 12 o'clock'' +/-. No resonance.
The problem is on 20 and 10 mtr.
No problem on 80, 40 and 15 mtr.

The problem is not only on receive , but also in transmit mode.
That means I can not use the transc. on 20 and 10 mtr. before this is solved.

Testpoint "TP" related to ground:

80m: 1.26V DC
40m: - 1.60V DC
20m: 1.26V DC
15m: - 1.16V DC
10m: - 0.8V DC

What do these values tell you?

Thanks for good advise.

Best regards

OZ5ZD, Bent

Here are some items for sale. Prices do not include shipping. I will ship overseas.

Swan 600R Custom Receiver with SS-16B Filter....$350 plus shipping
This radio covers 80-10 meters and matches the Swan 600T transmitter. The custom model comes with the Noise Blanker, Variable Notch Filter, and 16 pole SS-16B SSB filters.The radio is in excellent condition and receives well. The insides of the unit are also very clean. The power

transformer has been replaced and the new one can be seen in the last photo. The only other issue is that one of the disks is missing from one of the knobs.
http://members.cox.net/radiodx3/swan600r.JPG
http://members.cox.net/radiodx3/swan600r4.JPG
http://members.cox.net/radiodx3/swan600r3.JPG

Rare� National Radio NC-45.............$125 plus shipping
This is an 8 tube receiver made from 1941-1945 covering 550 kHz to 30 MHz. Most models made were made the NC-45 which is an ac/dc receiver. The NC-45A has a transformer operated power supply. This radio does work and receives signals on all bands but it really need to be recapped and aligned. Cosmetically OK but also needs to be cleaned up. It has all of the correct knobs and I do not find any extra holes. The insides look OK but also need to be cleaned up. One interesting thing that I noticed is that the main tuning and bandspread knobs are both weighted, rather heavy and appear to have come from the factory that way. I do not have a manual but they are available from several sources on the web. I will include a schematic.
http://members.cox.net/radiodx3/nc45rcvr.JPG
http://members.cox.net/radiodx3/nc45rcvr4.JPG
http://members.cox.net/radiodx3/nc45rcvr6.JPG

Kenwood TS-520 Transceiver..............$120 plus shipping
The unit is in very nice shape cosmetically and is compete. The receiver works very well but the transmitter is not working. The insides are complete and in good condition.
http://members.cox.net/radiodx5/ts520.JPG
http://members.cox.net/radiodx5/ts5204.JPG

Motorola 51X19 Wooden Table Radio-Brown Plaskon Grill...$100 plus shipping
This is a 5 tube radio from 1942. New electrolytics and most of the paper capacitors have been replaced. The set plays well. Cosmetically it is in in nice shape although their is a small chip out of the top near the edge which can be seen in the photo and the plaskon grill has been carefully glued where it had cracked.
http://members.cox.net/radiodx5/motorola51x19.JPG
http://members.cox.net/radiodx5/motorola51x194.JPG

Ten-Tec Power Mite PM3 and Matching AC Supply........$200 plus shipping
TenTec Power Mite and Matching AC Supply with instructions and original box. This is a late 1960's - early 1970's 2 band QRP transceiver that covers 40 and 20 meters, CW only. Output power was measured at a couple of watts. The radio works and is in pretty nice shape with a few small scratches.
http://members.cox.net/radiodx5/tentec_power_mite.JPG

Harman Kardon A-10 Allegro Vintage Hi-Fi Amplifier....$60 plus shipping
This is a mono unit with a pair of two 12AX7's driving a pair of 6BQ5's. The rectifier tube is a 6V4. I powered up the unit and it has bad hum so it needs new electrolytic caps. The unit is in nice shape and includes the original box but no manual.
http://members.cox.net/radiostuff9/allegro_hk.JPG

http://members.cox.net/radiostuff9/allegro_hk3.JPG

Heathkit IM-10 VTVM..........$20 plus shipping
The unit is working. It does not include test leads. The test lead uses a standard 1/4 inch plug which is included and banana plugs which can be obtained from Radio Shack.
http://members.cox.net/radiodx3/heathim102.JPG

Big Steel Louvered Cabinet - 19 inch Rack Panel for Homebrew xmtr or Linear Amp.........$50 plus shipping
This enclosure has a hinged top also. The dimensions are 22 inches long by 10.5 inches high x 16 inches deep. The size of the front panel that will fit this is 19 inches wide by 8.5 inches high. Other than some dust, this is in excellent condition and would be a great enclosure for a homebrew ham radio transmitter or linear amplifier.
http://members.cox.net/radiodx3/big19inchcabinet.JPG
http://members.cox.net/radiodx3/big19inchcabinet2.JPG
http://members.cox.net/radiodx3/big19inchcabinet3.JPG
http://members.cox.net/radiodx3/big19inchcabinet4.JPG

Steel Project Enclosure for Transmitter or Receiver....$15 plus shipping
A steel box which would make a nice enclosure for a homebrew receiver, transmitter or antenna coupler. The dimensions are 15 inches wide by 9 inches high by 11.5 inches deep. Their are no dents or dings, it just needs a cleaning.
http://members.cox.net/radiodx3/box2.JPG

Systron Donner Digital Multimeter Model 7241A (DVM)............$20 plus shipping
This unit will measures ac and dc voltage, dc and ac current and resistance up to 20 Mohms. This is in nice shape and is working. I checked it with a dc power supply and a resistance decade box and the readings look good. It also has a tilt up stand. Uses a standard computer type power cord which is included.
http://members.cox.net/radiodx5/systron_dvm.JPG
http://members.cox.net/radiodx5/systron_dvm3.JPG

General Electric YGA-4 Audio Oscillator.........$20 plus shipping
This has been tested and is a working unit.
http://members.cox.net/radiodx3/ge_audiogen.JPG
http://members.cox.net/radiodx3/ge_audiogen2.JPG

I trashed my Yaesu FTH-7009.
It's stuck on transmit.
Musta busted it with the homebrew programmer.
Nice man sent me a schematic for the 2-meter version,
but it's enough different that I can't follow it.
Need the real deal.
TIA for your help.
mike

Nice older 2-meter multimode. CW, USB, LSB, AM and FM transceiver.
Min. 10W output. I've used this rig with external amps to run meteor
and tropo scatter and EME.

Been keeping it to get back on EME but health issues are preventing
the construction of new antenna.

Asking $225 including shipping to CONUS.

email:n7ws@yahoo.com

Thanks and 73,

Wes

I just put this up on ebay, starting price $50:

Boonton Model 59 grid dip oscillator S/N 4128, manufactured 1947. Includes original set of 7 coils and manual. Surplus from a university lab. Hasn't been used for years. Looks clean and complete except line cord is cracked and should be replaced. Supplied as is.

Lots of descriptive information is available on the web for this particular unit.

Regarding your filament problem. Look for the November and December 1990 QST, "Circuit improvements for the Heath SB-220 Amplifier Part 1 and Part 2." Your answer is there. For example: One weakness in the SB-220's cooling system is that the infared radiation (heat) reflected back into the tubes from the bright aluminum surfaces adjacent and parallel to the anodes shortens tube life. This deficiency is easily corrected: After removing the tubes, apply black liquid shoe polish to the vertical aluminum surfaces near the tubes. In the design of your Amplifier, are the filament pins facing each other so the air from your blower is creating the maximum cooling? Does the blower direct the flow of air above and below the chassis at the same time? These criteria are important. The fans have to be lubricated at least once a year with thin non gumming oil such as Hoppe's no. 1003. A drop or two will do, more oil is not better, just messier. 73, Bob, VE6RI.

 Hello,

When my 790 receives on the subband and i transmit on the main VFO
then audio from the subreceiver is leaking to the main-vfo into the
transmission.
I tried to receive on different VFO's but nothing helps.
I know that there's is a fix for it but i do not have the link anymore.
Any suggestions ?

I heard a rumour on the air that Kenwood is quitting Ham Radio.
Can that be possible true? The TS-480 was truly excellent and
the TS-2000 really an innovation.

Would be a sad loss.

Have listed NIB dials, tubes, parts, with other stuff too AND I will
have more dial NIB from Millen, + coils from Miller,+EF JOHNSON:check
back often. I WILL HAVE TWO beautiful NIB EDDYSTONE DIALS very soon.

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZheytubeguy

Tnx, 73 heytubeguy

I still use a TS-450-sat and love it. I also sent them an e-mail. We
shall see.

That would be a shame. Their rigs have always offered
good performance and value. Wouldn't suprise me if
they did leave the market though. To say its a limited
market is an understatement.

Well, ARRL is pushing ICOM, as Icom is "sponsoring" stuff for them. Looks like
old fashioned kickbacks to me, but it seems unfair to the competition.

I owned an ICOM......once.

IMHO, Kenwood makes the best HF rigs, and Yaesu makes the best V/Uhf stuff.
but then I have only been licensed since 1984, so what do I know.

I have always been an Icom person, but there are some things Kenwood
has that Icom doesn't have anything close to.  In particular, the
TM-D700A, the TH-D7AG and the TH-F6A.  I have all three.

I don't think Kenwood has anything close to the Icom-7800 for HF.  Of
course for $15,000 one would expect a lot.

I have been licensed since 1951, so you're probably right.  :-)

Ten Tec is coming out with a new HF/6 mtrs rig, so the market isn't
completely dead. It'll be called the Omni VII.

The big differance is that Kenwood produces other electronic items, but Ten
Tec's only produce ham related items as far as I know. TT has to keep doing
somethig to sell the rigs or go out of business all together.

Between the input on this forum and links that i'm pointed to, wow.

So, questions, in no particular order.

Can a licensed FRS/GMRS radio with a fixed antenna be modified so that one has an external on therir roof higher up? Or two cars in a convoy with a CB type whip antenna connected to these 2 way radios.

How much power does a cellphone put out ?

can a 2.4 GHZ/ 5.4 GHZ wirless phone be modified with an external antenna on the base?

Thnx

jeff

No, not legally.

Making any modification at all to an FRS radio, immediately voids the radio's certification for use on the FRS frequencies, and it becomes illegal to use it to transmit on those frequencies.

The FCC rules on FRS radios specifically state that antennas on these radios may not be made removeable.

Some years ago, Radio Shack (or their OEM) figured out a cute way to work around this restriction. They built FRS radios in the form of a magnetically-mounted "puck" with a fixed whip on top, which were intended to be mounted on the roof of a vehicle. A cable ran back inside, with a speaker-mike on it and (I think) a cigarette-lighter plug. Because the radio itself was on top of the vehicle, and because the antenna was permanently attached and didn't have directional gain, the radio was within the rules and did receive FCC certification.

I don't think RS has sold this model for several years, and I don't know if a similar model is available anywhere else.

The rules are different for GMRS. I believe that it's possible to buy radios which operate only on the GMRS frequencies (they won't transmit on the FRS-only frequencies) and which have plug-and-jack antenna connections. You could put a whip antenna on your roof, if you use this sort of radio. You would have to have a proper GMRS license to do so.

>   Or two cars in a convoy with a CB
>type whip antenna connected to these 2 way radios.

Again, this is possible with GMRS-only radios, but not with FRS-only or dual-mode FRS/GMRS radios.

>How much power does a cellphone put out ?

Which cellphone? :-)

Typically it's a few hundred milliwatts on average, if I recall correctly.

>can a 2.4 GHZ/ 5.4 GHZ wirless phone be modified with an external antenna on
>the base?

It's physically possible, but it's very probably a violation of FCC rules. Making any "in the field" modification to a Part 15 device will void the device's certification, and it becomes technically illegal to use the device to transmit.

A meta-suggestion: if you're interested in using radios which can have more power, more available frequencies, and a lot more flexibility for modification and antenna selection and mounting, and if the intended application is not commercial/business use, why not buckle down and study a bit and get yourself (and others in your group) tested and licensed as ham radio operators? The test isn't difficult - quite a lot of people pass it after a one-day cram session, although I personally recommend taking a few evenings to read through the material and really understand the background - and the usual VEC testing fees for three or four people would come to less than the cost of one GMRS license.

Interestingly, my wife is also a Canadian, she moved down here to the US
just before we got married. She worked only part time in Canada.
Aparantly, the health care is NOT universal, as many meds she needed she
had to pay for out of her own pocket, and had to wait months for an MRI
(She just had one here on one weeks notice). Yup, there are issues here
too, but the Canadian system is far from perfect either.

Specifications with communications distance in them don't mean crap. I have talked over 90 miles with a 2M 1 watt HT,   (Alamagordo to El Paso). Terrain is everything.

There are delays I will admit that. Universal means that everyone can
participate it, it does not mean that it covers everything. I also have
private insurance to cover drugs, dentistry, the surcharge for private
hosptital rooms etc. I guess that I got really ticked off when the guy
said that hospitals routinely close because they run out of money, that
was bull and it really ticked me off. Please excuse my sensitivity.

Paul

Think of the overhead that American doctors face having to deal with
multiple insurance companies, each with different forms and procedures.
Think of the people who can't get medical insurance no matter what the
cost.  Think of those who don't have because they can't afford it.  And
then there are those who exercise their right not have it.

In a situation where people get treated but can't afford to pay, the
rates for everyone else must go up to compensate.

Canada is not perfect but it is a pretty nice place to live and we try
to contribute as best we can.

By the way, if I were an American I would vote republican but I am not a
single issue voter so don't construe that to mean that I from the far
right wing.  Consider me a fiscal conservative with a social conscience.

Does anyone on here know how to creat a non standard split on this
rig?   I dont have a manual.  Its already MARS modified for outside
the ham freqcys I just cant get a wide split for AFMARS.
Like 143.50 (rcv) and 142.150 (up).  The +/- 600 works fine
either in the bands our out side ham band limits.   Wish I had
some feedback on this.

I stand corrected.  I did of course know that.  I didn't want to go into
the "you have to be in outer space" type deal.

He actually *is* right.  That radio has an ERP of .17 watts on GMRS and .13
watts on FRS.  Uniden is notirious for putting out woefully weak radios and
inflating range claims.

Maximun licensed power for a Cellular Subscriber Unit is 3 Watts.
The Cellular Radio Service has an Adaptive Power Feature which
means that the Power Output of the Subscriber Unit is set by the
Base Station and determined by the signal level of the Subscriber
Unit at the Base Station.

I did not find the power level. Generally the .5 watt FRS are
advertised as 2 mile. 2 watt would be 4 miles. 4 watt would be 8 miles,
and 8 watt would be 16 miles. This just equates to signal level.
I bought a set of the lower budget units without the volume knob.
I was sorry. One feature I do not like, when it scans, it only locks onto the
channel for so long, then it continues to scan. There is no option in my unit to
change this.
I have gotten 4-8 miles on my FRS, not much of a problem line of sight.
They go over a hundred miles under optimum conditions.
It would be better if the GMRS and FRS units came with longer antennas,
of course the FRS transmit power would have to be decreased in that case.

I used to measure field strengths of my old FRS radios. A lot
of variation seen.

The old block cell phones had up to 3 watts, the new ones you hold in your hand are only a couple hundred mW at best. If they were capable of 3W output, those batteries wouldn't last 2 minutes. Looking at one of the high output batteries for my phone it says 560mAH. 3.7Vx.5A= 1.35W for one hour. That includes the power gulping digital electronics, the display, the audio output, etc. The battery lasts about 4 days making perhaps 2 calls a day.

Your math is off a bit.

From your starting point at 0.5W and supposing 2 miles, to double the range to 4 miles would require 2.0W (4x the power to double the distance). To double it again would be 8.0W for 4 miles, then on to 32.0W for 8 miles. This is based upon free space loss only, from point to point line of sight with no obstructions. There is a bit more loss to be computed in for atmospheric losses at 460MHz.

The FCC website
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family states
that FRS radios running at 0.5W have an effective range of less than a mile.

```

I'm a USAF Rescue pilot looking for a simple, single channel very low power AM transceiver in the 225-300 MHz range.

The use is for a training aid for a digital data burst communication device that plugs into aircraft radios and uses their transceivers.

This way aircrew can sit around a table and practice with them instead of having to use aircraft.

I am sure the defense contractors would want a thousand bucks a pop. Hell they charge $600 just for cables.

I know that you can get transceivers in a single chip now, so the engineering sure is simpler than it used to be, but I am clueless as to where to look.

Thanks.

Well I started off OK. Perhaps I was unintentionally trying to match the
companies claims for didtance.

If you don't care about the specific operating frequency, you might want to look at the FCC Part 15 low power transceivers being sold for garage door openers, etc. NUTS and VOLTS magazine has several vendors of these devices being marketed for robotics and short range data. Many are AM type around 315 MHz. Complete transceivers can be obtained very cheap because the use monolithic SAW devices. But if you need to interoperate with a regular A/C radio in that band, you will have to roll your own. Is there a "big" market for these?

No. You posted to Usenet (several groups, in fact), so it is your responsibility to check back with those groups, and get your answer that way. 'Hit-and-run' posting, in the form of asking someone to E-mail the data to you, is downright rude.

With that said: If you're capable of posting to Usenet, I would wager you're also capable of using the public licensee search on the FCC's web site.

http://makeashorterlink.com/?F5E02448D

Happy researching.

SolderSmoke!

A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/250909

Topics discussed in SolderSmoke #28:

- SPRAT Cermaic Oscilator article
- Tin whiskers and lead free solder
- QST's $50 rig design challenge
- Class C amps: Saturation required?
- Solder Smoke's LOGO DESIGN challenge
- FB QSO on 20 DSB with SM4FQW
- Slow Speed QRP (QRSS)
- WebShots, YouTube
- MAILBAG: K8WDE, KA6VKP, WB8ICN, VK2KYP KK7CC

Listen at: http://www.ourmedia.org/node/250909

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/250909

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us

feedback.

Rare, hardly, they can easily be found. New, old, even WWII new in the foil.
Like the other EbayTard that had a 1968 Evinrude advertised as 'Rare'

```
and wanted $2900!!!  The motor wasn't even worth $300.

Charlie: Do you still have the Yaesu YSK-8100 Separation kit? If so
I'll buy it from you.

Excellent condition, original receipt (1999) from Universal, original manual and a bound copy, all paperwork. Works perfect.

$1000 + shipping (insurance required) to protect buyer and seller.

Prefer USPO money order e-mail for scans. and my phone number should
you wish to ask questions.

I have a nice duelband older knwd ht. It quit transmitting(and recieving) on
440. When I set it to 440 it starts beeping every 3 seconds. The encoder
(tuner) appears to function correctly as does everything else. Anybody had a
similar problem?

"in very good condition" vs. "not tested"; it looks like a contradiction in
terms to me. How can you make the first statement if you haven't performed
a test, at least a minimal one?

I wrote some nice windows software to do that.

If you look on Yahoogroups in the NokiaBSR group, it's in the files area of there if I remember.

Hello,

I'm new to amateur radio, and there's a debate amoung some of my friends on whether it's legal to modify a ham radio to transmit on commercial and CB frequencies. I thought any radio that does transmit on these non-ham frequencies needs to have some type of FCC cerification, so modifying a ham radio to transmit on such non-ham frequencies would be illegal. However, some friends have told me it is legal to modify a ham radio to transmit on non-ham frequencies as long as you are authorized to use them and you transmit on those specific frequencies and on the allowed power.

At my work we have been allocated to use specific frequencies which are commercial and not within the ham frequency range, and I thought it would be illegal to modify a handheld ham radio to transmit on these frequencies. Am I correct?

If so, can someone point me to a website, whether on the FCC's site or ARRL's site or someplace else that shows this? Again, I assumed it was not legal to use a modified ham radio on such non-ham frequencies, but I've heard from others that it is. Just wanted to clear the air.

Thanks --

Alex

In a word NO ... They would not be Type accepted for those frequencies.

We however CAN modify commercial equipment to run on Amateur Radio
Frequencies as
long as they conform to requirements.

Amateur radio is almost unique, in that the rules are intended for
experimentation and thus pretty open. Pretty much all the other radio

services have quite limiting rules, and yes, one of those is about the radios matching very specific standards.

Hence, no one cannot used modified equipment in another service. Indeed, modifying a piece of commercial equipment for another service is likely to make it no longer useful for that service.

What seems like an obvious exception, using ham gear for MARS (and CAP if that still happens) is misleading. Because both services allow for amateur equipment to be used on those frequencies, the whole point being to make use of the existing pool of ham operators. Certainly MARS, and I think CAP, used frequencies adjacent to the ham bands so it was easy to use the same equipment. Decades ago, hams often had receivers that had a bit of extra tuning range that would take in those adjacent frequencies, and the transmitter could be shifted simply by changing crystals. This has changed as ham equipment has changed, so an actual modification is often required to take in those MARS frequencies. But that is just an opening up of the coverage.

Of course, modifying the other way works fine. Plenty of CB radios have been put to use on the ham bands after modification. But noteworthy is that once that equipment is modified, it's no longer suitable for its original use, and I believe the rules are such that even putting things back to normal is not good enough.

Modifying an "ham radio" to operate on a "Commercial Frequency"
with the intent to transmit on that "Commercial Frequency" would
illadvised. Commercial Radio Services like Marine, Aviation, Land
Mobile, Public Safety, ect, REQUIRE that the equipment be
"Type Accepted" by the FCC to be used in the US. Type Acceptance
is designed to make sure the radio in question, meets ALL the
Hardware and Emission Requirements, of the 48CFR Rules for that
Radio Service, which may or may not be different for each Service.
Some Radios may be Type Accepted for multiple Radio Services,
but not in others, depending on requirements of each Service Rules.

A couple of minor points here. The term, "Type Acceptance" has not
been used by the FCC for several years. It is now called,
"Certification."

And make that CFR47, not CRF48 http://wireless.fcc.gov/rules.html

Other than those two points, you are right on target.

```

I have the chance to buy a RF-2601 new in its boxes. Can anyone advise me if an RF-2601 and its control unit are a stand alone installation? The data sheet advises it is designed to operate with Harris transmitter. Do they come with an instruction manual? Is further info available? Do you need to pressurise with nitrogen to achieve full specs of 1KW average power.

He don't want to discuss equipment, he would rather post foolish crap,
bann him....

I have a brand new in the box Mosley TA53M 4 element, 5Band Beam for sale. These beams currently sell for over $800. I will sell this one for $$590 plus shipping from 79602. This beam has neve been out of the boxes. It includes all parts and the Instruction Manual. I will also trade it for a 5 Band Hex Beam, Model HX-5Bi. Thanks, Charlie Hugg, K5MBX

Of course, the key point that too many miss is that this newsgroup
is for the discussion of amateur radio equipment, not a buy and sell
newsgroup. If that key point isn't part of the complaint, then
that ebay policy would seem to allow it.

Fully agree. It is amazing how so many feel they need to post their wants, sales, auctions here as well as the more appropriate rec.radio.swap group. It is doubly annoying since I suspect almost everyone reads both groups, anyway.

* High Performance! NOT High Cost
o  A replacement solution for conventional
   power meter and sensor.
o Simple USB connectivity to laptop or PC.
o Multiple sensors on same PC
o  Light weight and easy to use.
o  Good for all manufacturing and I&M needs
o  Robust construction with high reliability
o No reference calibrator required.
o Measurement range from -50dBm to +20dBm up to 18.5GHz.
o Future products to 40GHz.
o Currently comes in two frequency ranges
http://www.satori-technology.com

Satori Technology Limited.
We will be on stand 426 at the European Microwave Exhibition in
Manchester, UK,  from
the 13th to the 15th of September. Come a long for a chat and see a
demonstration  of  our
ST series Power Meter.
We look forward to meeting you there.

I will be buying a Midland Two way radio (18 mile version)

My question is this:

The first 7 channels (1-7) which are combined GMRS/FRS...Do those transmit
at Full power or are capped at half a watt because It's FRS too?

If so, does than mean that channels 15-22are true GMRS at full power?

TIA,

Jeff

... and is probably most accurately answered by reading the owner's manual.

http://www.midlandradio.com/owners_manuals.asp seems to be the URL to use.

>The first 7 channels (1-7) which are combined GMRS/FRS...Do those transmit
>at Full power or are capped at half a watt because It's FRS too?

>If so, does than mean that channels 15-22are true GMRS at full power?

The manual for the GXT600/635/650/656 series indicates that the power output on channels 1-7 and 15-22 can be set to any of three levels. Channels 8-14 are locked at the "low" level.

The manual also states that a GMRS license from the FCC is necessary when using the radio to transmit on channels 1-7 or 15-22.

I read this all as meaning that the radio is capable of full GMRS-level power output on all of the GMRS-authorized channels (the shared GMRS/FRS channels 1-7 and the GMRS-only channels 15-22).

It's possible that the radio could be used legally on channels 1-7 without a GMRS license, if the power level were first manually set to the "low" position, but I'm not certain of that.

I'm trying to use this unit as a benchmark performance wise since I have
used it successfully from time to time.

Curiopus as to it's power output since it is NOT mentioned in the manual or
appears in a search anywhere online

Thnx

jeff

I meant the GMFS635 not the GMFS325, the 325 is 500MW

Why do so many people refuse to sell to Canada?  Amateur radio equipment
crosses the border without any duties.  There seems to be some feeling
that we are a strange foreign country.  I will agree that we are a
foreign country and maybe a bit different but not strange.  We do prefer
to deal with FEDEX  or the USPS because UPS often tacks on extra charges
for crossing the border.

I expect that the good folks in Alaska and Hawaii probably feel the same
way because I often see "lower 48 states only" as well.

I am a Canadian with serious chronic health problems and I have much more experience with the health system than I would like to have, I have come close being a silent key several times, I am sure that there are some who feel that is too bad that I was allowed to breed before my medical problems became obvious. In the minds of some I suppose that I have peed in the genetic pool.

I have never heard of a Canadian hospital shutting down because the money did not last until fiscal year end. While there are some weaknesses in our system such as delays in elective procedures but when the sand was running out of the hour glass there was always a system to help me out. Here everyone can get insured, there is an option to opt out of medicare but who would?

Think of the overhead that American doctors face having to deal with multiple insurance companies, each with different forms and procedures. Think of the people who can't get medical insurance no matter what the cost. Think of those who don't have because they can't afford it. And then there are those who exercise their right not have it.

In a situation where people get treated but can't afford to pay, the rates for everyone else must go up to compensate.

Canada is not perfect but it is a pretty nice place to live and we try to contribute as best we can.

By the way, if I were an American I would vote republican but I am not a single issue voter so don't construe that to mean that I from the far right wing. Consider me a fiscal conservative with a social conscience.

Yes, you may use channels 1-7 without a license IF you only use low power. Since that radio has type acceptance for FRS on channels 1-7, it is permitted for license free use provided all provisions of the part 95B regulations are followed.

The license free FRS frequencies are only authorized 500 mW ERP. Exceeding that, you would be operating under Part 95A rules, requiring a GMRS license.

I always recommend getting a GMRS license though. That way, you can use all 22 channels.

Ah.... there is no "GMFS"

Did you perhaps mean "GMRS"?

You need to look up the FCC ID at the FCC website. This will give you the output power. The FCC ID is usually located on the label at the back of the radio.

Typically, manufacturers grossly overstate power claims as well as range claims on these consumer-grade radios. Very sad state of affairs.

Go here to look up what you need:

You will never, ever get 18 miles. The claims by Midland are very
deceptive.

They lie and say they are 5 watt radios, when in fact their power output is
only slightly over a watt. They lie and say they have full legal power,
when in fact power limits for GMRS far exceed 5 watts.

Go here.... read up the whole site, explore links and get the real story:

Never, ever is pretty strong. It would take only a few milliwatts
between two mountain tops 18 miles apart. I agree that from a
practical standpoint, that is completely unrealistic, even for a full
5-watt transceiver. I have two excellent GMRS 5-watt HT's, and I'm
lucky to get even one mile in typical terrain. Now, if I had a really
good antenna, that would be a different story.

VERY useful information!!!!! Thnx

But on some reports, power output is expressed as dBm....not wattage

Jeff

"six mile radio" is a marketing term.  ~500 mw for power output sounds
perfectly plausable for an FRS/GMRS hand held.

You're reading it wrong. The rules limit the power, and there's no
stretching of that. But, the manufacturers can stretch the truth about
the range, if there was a fine print disclaimer next to that range statement
it would likely be under very limited conditions.

Sure, .5 Watt Output, from hilltop to hilltop, can easily span 6 miles.
I have a Part15 Spread Spectrum 2.4Ghz Radio with 100mw Output that
carries 2 ea. T1 Spans (4 Mhz Bandwidth) 16 miles, with 25db Fade
Margins on the link. There are Path Calculation Programs that can
provide excellent information on this issue.

>VERY useful information!!!!! Thnx
>
>But on some reports, power output is expressed as dBm....not wattage

Easy conversion.

               (dBm - 30)
  Wattage = 10

  dBm = 30 + log10(wattage)

30 dBm is 1 watt, 33 dBm is 2 watts, 36 dBm is 4 watts.

Agreed. A lot of the less-expensive FRS/GMRS radios have transmitters which only deliver the 1/2-watt legal limit for FRS. They can tune to, and transmit on the GMRS frequencies, but they don't do so at any higher power than than can do on the FRS-only and FRS/GMRS frequencies.

You could almost certainly get 6 miles of range out of these radios, if their receivers aren't horribly insensitive (which they sometimes are) and if you have a completely clear line-of-sight between one radio and the other (think "standing on a hilltop, talking to a guy who is standing on another hilltop six miles away that you can see without obstruction."

At ground level, with buildings and trees around, the range is likely to be on the rough order of a half-mile or even less.

Diego-

I am not familiar with that radio but have modified others to work in the Ten Meter Ham Band.

The various tuned circuits in the radio have a limited adjustment range, probably around 25 to 30 MHz at most. Beyond that, you would need to replace or rewind coils and/or change tuning capacitors for each circuit affected.

1. The X3 crystal is mixed with other signals to achieve the operating frequency. If you change its frequency far enough, other harmonics (Fundamental, 5th, 7th) may be selected. In addition, the mixing process has both sum and difference products present. Moving the frequency far enough, the wrong product could be selected. Either case might produce an unexpected operating frequency.

2. The mixer coil probably has a ferrite core that you can adjust with the appropriate plastic tool. DO NOT use a metal tool. This could easily crack the core, causing it to dig into the coil form as you attempt to turn it.

3. The mixer coil should not be related to the voice or 10 KHz steps. However it might result in a different step size or opposite sideband if adjusted for the wrong product as in (1) above. For small frequency

changes such as converting to the Ten Meter Band, not being tuned would
probably result in low output on transmit and poor sensitivity on receive.

73,
Fred, K4DII

All things being equal..what is the difference between a 3 mile rated
frs/GMRS and 6 mile GRS/GMRSrated 2 way radio when both employ 500mw power?

Does the fact that one is a tiny bigger, an inch longer on the antenna, 4
AAA batteries instead of 3AAA make one better than the other or is 500MW
Just 500MW

Impossible to say accurately without actually studying the two radios.

There may actually be significant differences in performance. Or, there may be no significant difference in performance, and the only distinction between the "3 mile" and "6 mile" radios was the amount of nitrous that the marketing/advertising people were huffing when they designed the packaging materials.

>Does the fact that one is a tiny bigger, an inch longer on the antenna, 4
>AAA batteries instead of 3AAA make one better than the other

Possibly. Possibly not. All else being equal, a radio with more (or heftier) batteries may have a longer useful run time than a similar radio with fewer/smaller batteries of the same type. I tend to prefer AA-cell radios over AAA-cell for this reason, although the AA-cell type are becoming harder and harder to find.

>   or is 500MW
>Just 500MW

To a first approximation, radios with similar transmit power, and similar receiver sensitivities, and similar antenna designs would be expected to deliver similar range.

Without actually testing the two models of radio under somewhat-controlled conditions, and/or tearing them apart, there's no way to know for sure whether there are significant performance differences.

The thing to remember is that FRS was set up to be a short-range radio system - the power limit on transmission, and the requirement that the antennas have no directional gain (above that of a halfwave dipole) and be non-detachable make it clear that the FCC did not intend FRS to be a long-distance radio system.

I've only ever seen one FRS radio whose performance was markedly worse than any other's. It's a cheap little "wear around the neck" model whose antenna barely protrudes from the case at all... and I suspect that the short and obstructed antenna is probably the cause of its poorer range.

But these radios are also GMRS too. Does that mean on the lesser priced models, GMRS can be powered by as little as 500MW too?

jeff

Most of the 2 billion cell phones that are in existence in the whole world (yes, 2 billion! US, China, Russia, even 100 million in India, plus everywhere else) put out less than one watt. And, I see cellphone towers spaced, what, ten miles +/- appart all over where I live and most cell phone calls are not over strict line-of-sight paths. Might not be a totally fair comparison, but some food for thought.

>> This six mile radio says in the FCC specs that it puts out only less than
>> half a watt...am I reading that right?

>Most of the 2 billion cell phones that are in existence in the whole world
>(yes, 2 billion! US, China, Russia, even 100 million in India, plus
>everywhere else) put out less than one watt. And, I see cellphone towers
>spaced, what, ten miles +/- appart all over where I live and most cell

>phone calls are not over strict line-of-sight paths. Might not be a
>totally fair comparison, but some food for thought.

Yup. Raw transmit power isn't the only factor. The tower height is an essential element of this system.

An interesting web page to read can be found at

   http://www.firestik.com/Tech_Docs/dist2horizon.htm

It discusses the distance to the visual horizon, as well as the "radio horizon" distance based on the antenna height (radio waves can often travel some distance beyond the visual horizon, for a variety of reasons).

According to the formula in this page, two radios whose antennas are located 6' above the ground, will have a radio-horizon distance of a bit less than 7 miles. At any distance greater than that, the Earth's surface will block the direct path between the two radios, and reliable communication (on FRS/GMRS and other UHF frequencies at least) will probably be difficult or impossible. Add in the effect of ground clutter (buildings and trees blocking the direct path and generating reflections) and you end up with a much shorter useful range.

Raising one radio up onto a building or hill greatly increases the transmission distance, for at least two reasons - it gets one radio out of the ground clutter and it increases the radio-horizon distance. With one radio at 100' and the other at 6', the radio horizon distance extends out to more than 17 miles.

The horizon distance and the presence of ground clutter often make more of a practical difference than raw transmit-power level. Going from 500 milliwatts to 5 watts is a 10:1 increase, which works out to a clear-line-of-sight range increase of around 3:1 - but if the other guy is over the radio horizon, you may not actually get any better communication using the higher power.

Radio shack has been officially dead for years as far as I'm
concerned, all they do is sell phones, toys and Sat set ups.

Hi all, can you help me on this problem please?
My friend who lives not to far off from me has his PC`s wired up to the
Internet via wireless, this includes mouse, keyboard, and of course
Internet.
The neighbour who lives next door has a 14 element Yagi 2 mtr beam on
his roof alongside other antenna.
Since this has been put up every time it is switched on and operated (I
would think) it knocks out the wireless Internet and mouse and keyboard.
And also the telephones that are also wireless. (I think they are the
digital type)
Is there any thing that can be done?
He has approached the neighbour but he wont have any of it and simply
will not listen.
This has only happend since all the equipment has been installed on the

roof.

TIA.

Assuming the licensed amateur station has been installed with all applicable measures taken to reduce RFI, then there is not a whole lot of recourse for the guy with all the unlicensed wireless stuff other than to buy wireless stuff that has better filtering.

In the majority of the world (including the US and the UK) the 2.4GHz ISM band is available for wireless use by unlicensed users on a secondary basis. That means that wireless users may not interfere with others, and must tolerate any interference received.

In this case the licensed neighbor is under no legal obligation to do anything to correct the interference.

It is highly unlikely that the neighbor's 2M ham equipment is causing any of your friend's problems. It sounds to me like there has been little evidence to indicate otherwise, other than the physical presence of antennas on the roof.

A more likely cause for your friend's problems is that a neighbor (maybe even the ham) has computer wireless networking equipment of some kind, and this is interfering with your friend's network. Or, it could be cordless telephones that also operate in the wireless network frequencies.

You really need to get more facts as to what is actually happening in your friend's house and do some research before blaming the ham. It could be him, but more likely it is another cause. To bad the ham is not cooperative as this could probably get him off the hook for the cause.

Good luck.

I agree. I run 100-watts to a 20-element 2-meter beam, and there is
no interference to my wireless network, wireless phones, wireless
keyboards or wireless mice. And none of my neighbors have reported
any problems either. Does this happen when the ham is not even home?

Can't speak to the WiFi issue at all.. but it's notable that most wireless keyboard/mouse setups operate on 11m R/C control channels (ours uses 27.045 MHz). I've seen rare ones that operate on 900MHz, and are very susceptible to cordless phone interference.

Hmmmmm........ What bands does your friends equipment use? From the information you have given, you have no reason to select the ham next door as the cause, other than he has a 2 meter antenna on his property. The equipment in your freinds own home could be part of the problem. e.g. If the cordless phones are 2.4 Ghz they could be killing the Internet connection whenever the phone rings. The mouse and keyboard could be bluetooth devices and they also work in the same band. Then there is the possibiltiy that someone in the neighbourhood also has a wireless network running on the same channel, or 2.4Ghz cordless phones and that could be the cause of some of his grief. It requires much more investigation that you seem to have done before you can say the guy with the ham antenna is the cause. Two meters is a long way from the ISM 2.4Ghz band. It would be highly unlikely that equipment in the 2 meter band would interfere with 2.4 Ghz equipment.

I am also surprised the ham is being uncooperative, but if he was approached in an adversarial manner, that could explain it. I'm sure he is well aware that the devices of which you speak are Part 15 and that he does not have any obligation to mitigate the problem even if he is the cause. Most hams would at least help investigate the problem if nothing to clear his good name.

You can use Netstumbler to check for orther networks in the neighbourhood. Download it from:

http://www.netstumbler.com/downloads/

Install and run it on a wirelessly connected computer (preferably a laptop), It will very quickly show what wireless networks are around the location. You might be amazed at how many there are !!!

Hope it helps a bit.

Ok thank you all for your kind replies.

He was approached with kindness, but sadly he is the type that is above
many laws and not just Amateur Radio.

I shall send my friend a link to netstumbler as you suggest, who knows this may give him some help.

Many thanks all.

Mike.

Hi, yes it only happens when he is at home.
This has only happened since the antenna has been put up on the roof.,
never before.

Mike.

Still does not prove that it comes from the ham's setup. It could be merely coincidental. Something else may have happened in the area that is the problem. Coincidences do happen.

FWIW, The last time I put up a tower with antennas, I left the feedlines and
rotor control cables coiled and tie-wrapped to the side of the tower for a
week.... I got a dozen complaints..... turned out that there was an
unauthorized and *very* illegal CB station on the next block over. The CB'er

ended up in a real world of hurt.... this was in family housing on a Navy base. Between the Navy, and the FCC.... well, lets just say that he can't even go near a transmitter for a very long time.

I have a CA-819 dual band cellular bidirectional amplifier for use with dual band cell phones. You'll need a sma to (your cell phone, external antenna connector) and that's it. Just plug into 12VDC..

Dual Band Wired Amplifier for all North American 800 MHz & 1900 MHz carrier systems (excluding iDEN Networks)

Features / Benefits

- Increase revenue through customer retention
- Less cell site build out
- Keeps customers connected to utilize the full potential of their phones and network services.
- Carrier friendly in urban areas
- Increases data traffic & data speeds
- Communication only occurs through the RSSI of the handsets
- Requires zero additional bandwidth from cell towers
- Case designed for Zero RF Emissions

CyfreT Amplifiers seamlessly bridges RF amplification between Cell Towers and todays elaborate handsets without disrupting the carrier's tower management Networks. Thus, the entire CyfreT line of amplifiers becomes an integral part of all wireless network solutions.
Network Compatibility
Cyfre'sT creation of the Digital Microprocessor, combined with licensed Motorola patented technology, have achieved compatibility with the following standards.
CDMA 2000, TIA/E-98-A&D, 1xRTT, TIA/EIA-690 Analog (dual-mode), IS-95-A&D, and GSM.

Cyfre'sT cutting edge technology will change forever the perception all RF amplifiers are the same and deplete valuablde bandwidth from tower management systems. Independent laboratories accredited by the FCC/IC regulators verify all CyfreT claims.

Six Sigma Certification
CyfreT strives for the highest quality manufacturing standards possible. CyfreT products are manufactured under Six Sigma Certified Process Control Standards, far exceeding ISO 9001 and 9002 manufacturing facilities.

Made in the USA
The complete line of CyfreT amplifiers are manufactured in the USA

Frequency Specifications

Specifications	TX Uplink/Transmit	RX Downlink/Receive
Frequency Range:	824.0-849.0 MHz	869.0-894.0 MHz
	1850.0 - 1910.0 MHz	1930.0-1990.0 MHz

Uplink: 824.0-849.0 MHz 1.0W (+30dBm CDMA)*
Downlink: 869.0-894.0 MHz 0.02 W (+12dBm)
Uplink: 1850.0 - 1910.0 MHz 1.0W (+30dBm CDMA)*
Downlink: 1930.0-1990.0 MHz 0.02 W (+12dBm)

Gain: 30dB maximum, variable from +20 to +30 dB

Maximum power measured into 50 ohms at the antenna terminal.

General Specifications

Input Voltage 8.0 VDC - 28.0 VDC
Current draw 100 to 890 MA
RF Input Power 10 - 60mW
Receiver Sensitivity -110dBm (maximum)
VSWR less than 1.9 at the handset connection
Signal Sensitivity -115dBm (maximum)

Temperature range:
Operating -30 C to +60 C performing within specification
-40 C to +90 C without loss of function
Storage -40 C to +90 C

Humidity 85% at +85 C
Impedance 50 ohms

Dimensions:
Length: 5.25 inches - Width: 5.18 inches - Height: 1.06 inches - Weight: 1.55 lb

RF connector: SMA Male / Female

Tested on the following standards which it meets or exceeds:
IS-95, IS-98, IS-2000, 1XRTT, AMPS, CDMA, TDMA, GSM, W-CDMA, EDGE, EVDO Rev 0, EVDO Rev A

FCC ID: RFK-LMSWDJH819
IC: 5252A-CA819
Asling $150 plus shipping - photos upon request

For Sale a very nice Sencore Mighty Mite III, T130, tube tester in very good condition and it works good. Comes with the original manuals. It will test many useful tubes such as radio tubes and audio tubes 7199, 6550, 12AX7, 12AU7, 6DC6, 7868, 6BQ5, Etc It tests for Emission, grid leakage, and shorts. A great little tester and easy to use. Buyer pays shipping. Price is $55. Thanks, Charlie Hugg, K5MBX

5 Kenwood TK-860H's UHF Mobile Ham/ commercial Radio, 4 microphones and 1 programing cable and the software via the web (link below), you download. Programs via the included cable. These were power company pulls and have been tested good. 2 of the radios have minor dents on top near the speaker.

Hey, now, they've got some fairly nice banana plugs :-)

Also, soldering gear, so they're not totally dead.

Besides, I've never thought of them as a place to buy ham or shortwave
radios -- so I don't miss whatever they don't sell anymore.

Between AES, the Wireman and Mouser, I can get pretty much what I
need.

Do you still have the DSP-59Y?
Thanks

As you say, if the amateur station is properly installed the wireless
system is stuck. Most of the *stuff* available for home use is pretty
poor when it comes to filtering. Just think what it'd be if they have
some one operating on 2.4 Gig next door.

As a side note, a friend who uses wireless also put in some web cams
along with his wireless phones. Everything interfered with everything
else. He finally put in 5 gig phones and relocated the web cams. He
runs the legal limit on most of the ham bands and has no interference
in either direction. I have a dual, Cat5e gigabit and wireless
router. When used with wireless its antenna is about 4 feet from my
2-meter rig. I can use my 5W HT within a few feet of that antenna and
neither system hears the other.

more than likely some one in his neighborhood has an old TV antenna
preamp up in the attic that is picking up the 2-meter signal and
creating a bunch of harmonics, but that is a *LONG* way above the
2-meter band.

>
>Can't speak to the WiFi issue at all.. but it's notable that most wireless

2.4 and 5 Gig which are also ham bands.

>keyboard/mouse setups operate on 11m R/C control channels (ours uses 27.045

My wireless keyboards and mice are all IR.

>MHz). I've seen rare ones that operate on 900MHz, and are very susceptible
>to cordless phone interference.

Xref: g2news2.google.com rec.radio.amateur.equipment:5531

I found a comment in google groups about changing the crystal in the
Cobra 148 GTL radio

http://groups.google.com/group/rec.radio.amateur.equipment/browse_frm/thread/
bdb8f6014aecff06/55ae7197545990ad?lnk=st&q=&rnum=3&hl=en#55ae7197545990ad

Plase, I apreciate too much a respose to this questions:

1.- In the comment say:

"...For every 0.150 Mhz increase in freq of this Crystal you will get a
450Khz increase in operating freq..."

QUESTION: What is the minimum operating frecuency that I can reach
changing the X3 crystal ? 25Mhz, 20Mhz, 15 Mhz, 10Mhz, 7Mhz.

2.- About "...retune the Mixer coil..." how I can do that? (an url may
be usefull to read about that)

3.- About "...retune the Mixer coil..." is realated with the voice look
or 10khz steps ? what will be the bad functioning in the radio if I can
not retune de mixer coil.

Thanks a lot

Att.
Diego.

FS Collins 32V-3 AM/CW Transmitter
Cabinet is a primer gray, no dents on cabinet. Its great.
The front panel was perfect until
I had a radio near it and scratched the paint. Its not a grooved in
scratch, just paint came off. If you can match the paint where it came
off, it will look great.
Works 100 Percent and with GREAT audio reports. Has a newer Peter Dahl
Power Supply installed.
I used it for about 7 Months and just recently stopped using it.
750.00 Looking for a local pick up. But if you want to take a chance
on shipping.
You pay shipping and insurance.
But Don't hold me to damages.
Its heavy and can get banged around in shipping.
I can pack well.
ritchi50@optonline.net

Marqueer's Message From Hell
"Then he said, I pray thee therefore, father, that thou wouldest send him to my father's house: For I have five brethren; that he may testify unto them, lest they come into this place of torment. Abraham saith unto him, They have Moses and the prophets; let them hear them. And he said, Nay, father Abraham: but if one went unto them from the dead, they will repent. And he said unto him, If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead." Luke 16:27-31. Listen to Moses and the prophets:
"Thou shalt not lie with mankind, as with womankind: it is abomination." Leviticus 18:22.

"Hell from beneath is moved for thee to meet thee at thy coming...the worm is spread under thee, and the worms cover thee." Isaiah 14:9-11.

"The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb; And the smoke of their torment ascendeth forever and ever; and they have no rest day or night." Revelation 14:10,11.

Nobody cares.  Why don't you just get married in a state that accepts
gay marriage and be done with it?  Gay or not, quit crapping on the
newsgroups.

It's getting very old and nobody cares.

nope

infact I as far as I recall I never rode a bus to school at all

other than I did try a few times geting to college on the city bus
system it took way to long and saved very little (but gas cheaper then)

Here are your words:

> If you get sick late in the year, and the healthcare
> facility/hospital shut down for the rest of the year because it ran
> out of government money (a typical scenario in Canada), there will be
> no one to give you any care and you'll just die.

Pray tell, oh wise one, from what source are you getting this
information? You claim that this is a typical scenario in Canada, which
is utter BS (= Bush shit), which means that it happens all the time. It
seems rather strange that none of this seems to make the headlines or news.

BTW, I overheard this while I was visiting in Toronto and witnessed an
accident: " Wow! The police and ambulance are much quicker here than in
Atlanta".

JB

Maybe they just don't want you to know the truth? Not surprising, since the
government in CanaDuh woud fall if you ever discovered the truth.

> BTW, I overheard this while I was visiting in Toronto and witnessed an

Did the accident involve the police and the ambulance racing to the donut shop?
Maybe that's why they appeared to be quicker.

My ICOM AT500 has a fault where the auto tuner portion works properly
on transmit but on receive, the tuner retunes to a non matched setting.

The presets work and I can manualy tune the tuner via the presets (but
that defeats the point of having an auto tuner)

Problems began when the shaft on one of the motors come loose. I believe I have everything mechanically back together correctly as there seems no way that the auto tuner portion should work on transmit and then de-tune on receive.

This unit is full of analog circuits and I have no clue where to start.

Any help or suggestions would be appreciated.

73, Bernie, VE3FWF

The Dallas/Maxim DS1678 event logger has appearently been discontinued. Can someone please suggest a source for a small number (10-15) of these chips?

Thanks
Jim

----> hamjamming dot com ROCKS !!!!!!!!!!!!!!! Great job dude!

Now if SOMEONE could just set up an online
shrine with .MP3 files of the infamous 14.313/14.300/3.894.5
wars of several years ago, the cycle would be complete.

WWW.HAMJAMMERS.COM

Free Audio Downloads From The Dark Netherworld of Ham Radio:

The Most Infamous Lids To Ever Disgrace The Amateur Service!

This website is devoted to demonstrating what an absolutely
worthless, stupid hobby ham radio is.If anybody tells you that
ham radio is fun, or interesting, or that you will meet nice,
interesting people by becoming a ham, DON'T BELIEVE THEM!

Hams are the biggest group of whiners, snivelers, complainers and all-around no-talent losers you will ever meet.This is because the system itself is a veritable recipe for selecting dweebs and idiots with pocket protectors: Take a fat dweeb who has no friends or social skills and can't get a date; give him a trivial exam where the questions and answers are all available beforehand; and then give him a license and tell him he's somehow "special". Voila! You have an insufferable, boring ham radio operator who thinks he's morally and intellectually superior to other people.

It's inevitable. Don't make the mistake of getting involved in this hobby!

WARNING: Some of the audio files are rated "R"! Your Webmaster cannot be responsible if you become addicted to listening to jamming recordings and you lose your job because you don't show up for work.

Oh Brother!
Reality check time: Why don't YOU read a bit about Medicare D?
Aging baby boomers are about to be screwed in ways they couldn't even
imagine.

Insurance companies entirely control Congressional debate and actually
write the rules.  Most of Congress doesn't even READ what they're
signing on to.

O'Reilly, is that you?

I hope this is the correct newsgroup for this question.
Can someone explain DX Ducting?
I believe thats the correct word.

I live in a rural area, and my nearest tv stations are about 50 miles
```

away. Those 3 stations normally come in pretty good. (one VHF, two UHF) I have a 7 element antenna pointed approx. north (toward that city). The other closer stations are to the south, and are 65 and 90 miles away. They dont come in as good, but are usually viewable. Turning the antenna South helps those, but I have to do it manually until I get a new rotor. (old one died).

For some reason, starting on Saturday, I have been getting tv stations from up to 275 miles away, yet I can not get any of these "local" stations at all. What's really weird, is that the stations I am getting are all to the East of me. In other words, they are broadside to the antenna. I have never heard of getting a signal on the broadside.....

Just for grins, I called the 800 number of one of these distant stations, and they were happy to hear they were transmitting about 250 miles. They said the reason is called ductingm and said it's caused by the atmosphere and weather conditions.

OK, I can undestand this (sort of). I do recall back in the 70's when I had a CB radio in my car, and getting "Skip". But this TV things is different, becasue a tv antenna is directional, unlike a CB antenna that tends to transmit in all directions.

I looked up "Ducting" on the web. Most were about heating ducts, but did find one link which was way over my head. I'd have to be an engineer to understand it.

In simple terms, could someone please explain this. Particularly why I can not get the "local" stations, and how can I get very distant signals on the broadside of my antenna?

Thanks

Mark

<snippage>

Basic somewhat oversimplified explanation of atmospheric ducting goes as such:

You have a layer of warm air at the surface, you have another layer of warm air high aloft. In between those you have a layer of colder air. The ducting occurs in this layer. Depending on how far this condition extends, you may have ducting of signals from 100-1500 miles distant (roughly, YMMV). Note: The condition need not exist either in the area of the station received or your own area, so long as it exists between in an area where the originating signal can be captured and ducted to an area near you.

Although beams are directional antennas, they can and do pick up broadside to the beam. They normally just don't pick up as well. Beams have a pattern that has the strongest pickup to the front, a smaller pickup from the back, and very weak pickup from the sides. If the signal is strong enough, you will be able to receive a signal off the side of the beam.

Yep. You sure do have a piss poor academic record, too.

> infact I as far as I recall I never rode a bus to school at all
>
> other than I did try a few times geting to college on the city bus
> system it took way to long and saved very little (but gas cheaper then)

You were never in college, retard. Maybe barber college.

Sasys the kiddie diddler Markie. Markie just loves to get a kid on the
radio and talk about having sex with that kid.
